

Call 04 Mill & Overlay approximately 10 miles on SR 9 from North of US 278/SR 6 to North of Eads Creek Road, known as Federal Aid Project No. STP-0050-01(032) / 106403301, in Pontotoc County.

Q1. The typical section, TS-1, shows the milling extending out over the 2 foot trench widening. Is this correct?

A1. Yes, did not want to create a “trap water” situation!

Q2. There are several areas throughout the project where the two foot widening cannot be placed due to narrow shoulders and other areas where only the two foot widening can be placed and the gravel cannot. Please advise.

A2. It is the intent to place trench widening in all areas throughout the project. Granular material will be placed if field conditions allow.

Q3. Can the patching be performed prior to the milling?

A3. Yes
