

Call 06 Mill & Overlay approximately 6 miles of SR 3 from US 49 to Quitman County Line, and approximately 14 miles from Tallahatchie County Line to SR 6, known as State Project Nos. MP-2003-68(001) / 304824301 & MP-2003-60(009) / 304824302 in Tallahatchie & Quitman Counties.

- Q1. The Scope of Work states that the 19mm, MT is to be used to replace material removed from the failed areas. The Contract quantity as of today shows that 3,834 tons of 19mm, MT has been setup in the project. If you take the square yardage for the Removal of Concrete Overlaid w/ Asphalt Pavement, all depths and figure the asphalt that it would take to backfill the excavated area at approximately 1 foot, you don't come anywhere near the quantity that is setup for the project. My question, is there another schedule that shows additional failed areas? Is the 19mm, MT to be used elsewhere or does the quantity need to be adjusted?
- A1. See the upcoming Addendum #1 for this project.
- Q2. What is the 3,834 tons of MT 19mm asphalt to be used for?
- A2. See QandA #1.
