

Call 04 Widen and Overlay SR 178 From Holly Springs Eastern Corp Limit East approximately 9 miles to approximately 1 mile West of US 78, known as Federal Aid Project No. STP-2910-00(004) / 106609301 in Marshall County.

Q1. I don't see the sign sheet showing the construction signs at the BOP and EOP and the Do Not Pass / Pass with Care Signs that are usually in the proposal. Will this be added? It has the wing barricades and double fine signs as well!

A1. Yes, see the addendum for this project.

Q2. There were no station numbers on the road when I drove through. Am I correct in assuming that the area of work from Station 504+05 to 508+34 Right is the old abandoned asphalt parking area across from the intersection with Musgray Road?

A2. Musgray Road is the approximate location.

Q3. On the project, there are several bridges that have low weight restrictions. Heavy equipment and trailer trucks carrying asphalt and gravel cannot legally cross these bridges as they are posted. Also, the equipment required to construct the project based on the scope of work will exceed the posted weight limits of the bridges. Will exceptions be made to allow trucks and equipment to access and cross these posted bridges?

A3. Weight restrictions will not be enforced on bridges inside the project limits.
