SECTION 905 -- PROPOSAL (CONTINUED)

I (We) further propose to execute the attached contract agreement (Section 902) as soon as the work is awarded to me (us), and to begin and complete the work within the time limit(s) provided for in the Specifications and Advertisement. I (We) also propose to execute the attached contract bond (Section 903) in an amount not less than one hundred (100) percent of the total of my (our) part, but also to guarantee the excellence of both workmanship and materials until the work is finally accepted.

I (We) enclose a certified check, cashier's check or bid bond for **five percent (5%) of total bid** and hereby agree that in case of my (our) failure to execute the contract and furnish bond within Ten (10) days after notice of award, the amount of this check (bid bond) will be forfeited to the State of Mississippi as liquidated damages arising out of my (our) failure to execute the contract as proposed. It is understood that in case I am (we are) not awarded the work, the check will be returned as provided in the Specifications.

Bidder acknowledges receipt of and has added to and made a part of the proposal and contract documents the following addendum (addenda):

ADDENDUM NO.	1	DATED	8/14/2013	ADDENDUM NO.		DATED	
ADDENDUM NO		DATED		ADDENDUM NO.		DATED

MISSISSIPPI DEPARTMENT OF TRANSPORTATION

SECTION 904 - NOTICE TO BIDDERS NO. 2382 **CODE: (IS)**

DATE: 02/12/2009

SUBJECT: Status of Right-of-Way

Although it is desirable to have acquired all rights-of-way and completed all utility adjustments and work to be performed by others prior to receiving bids, sometimes it is not considered to be in the public interest to wait until each and every such clearance has been obtained. The bidder is hereby advised of possible unacquired rights-of-way, relocatees and utilities which have not been completed.

The status of right-of-way acquisition, utility adjustments, encroachments, potentially contaminated sites and asbestos containation are set forth in the following attachments.

In the event right of entry is not available to ALL parcels of right-of-way and/or all work that is to be accomplished by others on the date set forth in the contract for the Notice to Proceed is not complete, the Department will issue a restricted Notice to Proceed.

STATUS OF RIGHT-OF-WAY
NHS-0010-01(145)
105281-302000
Harrison County
July 17, 2013

All rights of way and legal rights of entry have been acquired **except:**

NONE.

STATUS OF POTENTIALLY CONTAMINATED SITES
NHS-0010-01(145)
105281-302000
Harrison County
June 7, 2013

THERE IS NO RIGHT OF WAY REQUIRED FOR THIS PROJECT. NO INITIAL SITE ASSESSMENT WILL BE PERFORMED. IF CONTAMINATION ON EXISTING RIGHT OF WAY IS DISCOVERED, IT WILL BE HANDLED BY THE DEPARTMENT.

ASBESTOS CONTAMINATION STATUS OF BUILDINGS
TO BE REMOVED BY THE CONTRACTOR
NHS-0010-01(145)
105281-302000
Harrison County
June 7, 2013

Reference is made to notices to bidders entitled "Asbestos National Emission Standards for Hazardous Air Pollutants (NESHAP)" and "Removal of Obstructions".

The following pertinent information is furnished concerning asbestos containing materials (ACMs), if any, found in buildings to be removed by the Contractor.

There is no Right of Way required for this project. There are no buildings to be removed by the contractor.

ENCROACHMENT CERTIFICATION

NHS-0010-01(145) / 105281302

Harrison County(ies)

July 15, 2013

This is to certify that the above captioned project has been inspected and no encroachments were found.

UTILITY STATUS REPORT

NHS-0010-01(145) / 105281302

Harrison County(ies)

July 15, 2013

This is to certify that the above captioned project has been inspected and potential utility conflicts are as noted below.

Coast Electric Power Association

Coast Electric Power Association has aerial power lines running the north side of Big Ridge which would be in conflict with the construction of the bridge. Coast Electric Power Association is scheduled to complete the relocation at the end of September 2013.
Restriction Area: STA. 15+00 - 37+00.
Contractor's operations would be adversely affected.

AT&T-Mississippi

AT&T has underground communications lines running the south side of Big Ridge which would be in conflict with the construction of the bridge and roadway. AT&T is scheduled to complete the adjustments at the end of September 2013.
Restriction Area: STA. 17+00 - 37+00
Contractor's operations would be adversely affected,

Mississippi Power -Transmission Division

Mississippi Power (Transmission Division) has not completed relocating their facilities, but their structures are outside the construction areas and should not interfere with our proposed construction. Mississippi Power is scheduled to complete the adjustments at the end of February 2014.
Contractor's operations should not be adversely affected,

Cable One

Cable One has aerial cable lines running the north side of Big Ridge which would be in conflict with the construction of the bridge and roadway. Cable One lines are attached to Coast Electric Power Association poles. Cable One is scheduled to complete the adjustments mid October 2013.
Restriction Area: STA, 15+00 - 37+00
Contractor's operations would be adversely affected.

CenterPoint Energy

CenterPoint Energy has underground natural gas lines ruining the south side of Big Ridge which would be in conflict with the construction of the bridge and roadway. CenterPoint Energy is scheduled to complete the adjustments at the end of September 2013.
Restriction Area: STA. 17+00 - 37+00
Contractor's operations would be adversely affected.

City of D'Iberville

The city's water and sewer facilities will be included under the construction operations
Contractor's operations should not be adversely affected.

This is to certify that all necessary arrangements have been made for all utility work involved to be undertaken and completed as required for proper coordination with the physical construction schedules.

As noted above, contractor's operations should not be adversely affected, except as noted above.

MISSISSIPPI DEPARTMENT OF TRANSPORTATION

SECTION 904 - NOTICE TO BIDDERS NO. 4587 **CODE (SP)**

DATE: 08/14/2013

SUBJECT: Placement of Fill Material in Federally Regulated Areas

PROJECT: NHS-0010-01(145) / 105281302 – Harrison County

A Permit (404, General, Nationwide, etc.) for placing fill material federally regulated sites is required.

The Department has acquired the following permits for permanently filling at regulated sites that are identified during project development:

Nationwide Permit No. 14 (Waters of U.S.) - All sites with area less than 0.10 acre.

General Permit No.46 (Wetlands & Waters of US) – All Sites Per Table of Impacts (ID. No. SAM-2013-114) in Permit.

Copies of said permit(s) are on file with the Department.

Securing a permit(s) for the filling of any other regulated site, the purpose of which is temporary construction for the convenience of the Contractor, shall be the responsibility of the Contractor.

MISSISSIPPI DEPARTMENT OF TRANSPORTATION

SPECIAL PROVISION NO. 907-829-2 **CODE: (SP)**

DATE: 07/30/2013

SUBJECT: Noise Barrier Walls

PROJECT: NHS-0010-01(145) / 105281302 – Harrison County

Section 907-829, Noise Barrier Walls, is added to and becomes a part of the 2004 Edition of the Mississippi Standard Specifications for Road and Bridge Construction as follows.

SECTION 907-829 - NOISE BARRIER WALLS

907-829.01--Description. This work consists of furnishing and erecting the noise walls in accordance with these specifications and in reasonably close conformity with the dimensions, lines, and grades indicated on the plans. The walls are to be designed as post-supported. The wall shall be designed according to AASHTO Guide Specifications for Structural Design of Sound Barriers, 1989 and 1992 Interim Specifications.

907-829.01.1--Wall Unit Design, Performance Requirements and Submittals. Detailed layout, fabrication drawings, and complete engineering calculations based on the general layout in the MDOT plans shall be submitted for approval prior to construction. The submittals shall include and meet, but not to be limited to the following requirements:

1) The drawings shall include all information necessary for prefabricating or field constructing wall sections and posts. Drawings shall show shape, dimensions and layout of wall components and details of reinforcing steel, as well as quantity, type size and details of connection and lifting hardware, and any additional details necessary for a complete review.

2) The drawings shall include a complete elevation view of each wall section indicating top and bottom elevations as well as roadway grade. The Contractor shall design the top of the barrier to be horizontal and at or above the wall profiles shown on the plan drawings. Change in elevation shall be accomplished by stepping sections at post. Step shall allow for a smooth transition in wall height as determined by the Engineer, and shall not exceed two (2) feet in height. The drawings shall include a numbered wall component layout, and shall show horizontal and vertical alignment of the wall. Panels may be cast in sections and stacked to achieve the design height. All joints shall be lined up and horizontal alignment shall be maintained for the joints continuously for as many bays as practical.

3) The drawings shall also include all information needed to erect the wall, including the proposed drill shaft elevations and depths, the details and construction procedure for connecting panels, panels to posts, and posts to foundation shafts, details necessary to

account for change of grade, details for any additional drainage structures, details for spanning or integrating with any existing or new drainage structures or ditches, and any additional details necessary to complete the work.

4) All drawings shall be clear and complete, and shall be thoroughly checked before submittal. The Contractor shall be solely responsible for the content of the design plans and shall ensure the details of the wall conform to all requirements of the contract plans and specifications. Six sets of prints of the completed wall design plans shall be submitted for distribution. The prints submitted shall legible and have distinct details of sufficient contrast to be suitable for reproduction. The electronic CADD files for all drawings shall be submitted with the reproducible drawings on 3½-inch floppy disks or CD with the filenames contained thereon listed on the exterior of the disk to the primary Roadway Design Division contact. The CADD files shall be developed with MICROSTATION and shall be in a compressed zipped (.ZIP) format.

5) Design calculations shall include a summary of all design parameters used, including material types, strength values and allowable stresses, soil parameters, assumed loads and load combinations. Calculations shall be submitted covering the full range of heights and loading conditions of the noise wall.

6) All drawings and design plans submitted for distribution shall be signed, sealed and stamped in accordance with the laws relating to Mississippi State Board of Registration for Professional Engineers and Land Surveyors. The Contractor shall verify the design by the wall system supplier. Information to be verified shall include, but not be limited to soils, ground topography, design loads, location of utilities and other obstructions.

7) A sample wall section shall be submitted prior to construction of any wall panels. The section shall be constructed using the identical process for casting the permanent wall panels, including the installation of any hardware that will be used. If changes such as wall texture or color are required, a new sample panel shall be constructed before final approval can be made. The minimum sample panel shall be 4'x4' and include two sample posts and be erected at a location specified by the Engineer. The Engineer will reject wall units and posts not conforming to the approved sample wall section.

8) Submit construction sequence and scheme showing method and sequence of assembly of the noise wall, including drilling of shafts, placement of posts, reinforcement and concrete, excavation, bracing for excavation if required, installation of wall units, and placement of backfill.

9) Submit manufacturer's color samples for selection by the Engineer.

10) The wall shall be designed to limit the deflection in inches at the top of the wall due to wind load to not exceeding height of wall in feet divided by 50.

11) Working Stress Design shall be used in the analysis and design.

907-829.01.2--Qualifications. The installer of the wall shall have a minimum of five years of experience in the design and construction of noise walls, documented in a list of at least five (5) projects, which substantiate experience in noise walls. Include a brief description of each project and the name and phone number of owner's representative knowledgeable in each project listed.

907-829.02--Blank.

907-829.03--Construction Requirements.

907-829.03.1--Ground Mounted Noise Wall.

907-829.03.1.1--Foundation Design Parameters. The following design parameters for the soil shall be used in design of ground mounted noise wall foundations.

LPILE Design Parameters for Noise Walls

Internal *p-y* model	$\gamma`$ Effective Unit Weight (pci)	c_u Undrained Cohesion (psi)	ε_{50} Strain Factor -	ϕ Friction Angle (degrees)	k Soil Modulus (pci)
Soft CLAY	0.026	2.43	0.020	--	30
SAND (Reese, 1974)	0.032	--	--	30	60

907-829.03.1.2--Noise Barrier Walls and Posts. Noise wall panels and posts shall be constructed of pre-cast concrete in accordance with the plans and these specifications and approved shop drawings.

1) **General:** Fabricate, transport, and erect panels and posts in such a manner as to prevent damage thereto. Fabricate the panels and posts in accordance with Sections 804, 805 and 806, except as modified below,

   (a) Use form that is true to the dimensions shown in the approved shop drawings.
   (b) Place the concrete in one continuous lift resulting in no cold joint.
   (c) Provide all accessories, materials, and methods which are not specifically specified in the plans and these specifications, but which are essential for installation or construction of the walls and posts commensurate with the best standard practice of the industry, subject to the approval of the Engineer.

2) **Materials**: Furnish the Engineer with certification that the pre-cast concrete supplied for the construction of the walls and posts meet the concrete class and strength requirements specified in the plans.

3) **Construction**: Noise wall panels and posts shall be constructed as follows.

(a) Fill any and all holes on the panels resulting from their fabrication or installation with an approved mortar grout.
(b) Cut all exposed bars, etc., used in lifting or assembling the panels and posts flush with the surface. Then clean the bars, and coat the opening with an approved epoxy.
(c) Paint all exposed metal fasteners in the finished work with an approved galvanized paint.
(d) Do not use panels and posts damaged by improper storing or handling.
(e) Posts shall be either pre-cast, reinforced concrete or pre-cast, pre-stressed concrete. Final color shall be as directed by the Engineer. Post attachment to the panels shall be tongue-and-groove connection. Post attachment to the footing may be steel anchor plate or by embedment in poured concrete. Post construction and connection details shall be specified in the shop drawings.
(f) Use anchor bolts made of steel meeting the requirements of ASTM Designations: A 305 and A 325 and galvanized in accordance with ASTM Designation: A 153. All structural steel and plates shall be A 36 steel. All exposed metal shall be hot dip galvanized in accordance with ASTM Designation: A 123.

907-829.03.1.3--Cast-In-Place Concrete.

907-829.03.1.3.1--General. All Cast-In-Place concrete shall be in accordance with the plans and these specifications.

907-829.03.1.3.2--Materials. Materials for Cast-In-Place concrete shall meet the following.

(a) Provide concrete of the class specified in the plans.
(b) Provide reinforcing steel of deformed bars meeting the requirements of ASTM Designation: A 615, Grade 60.
(c) Use anchor bolts made of steel meeting the requirements of ASTM Designations: A 305 and A325 and galvanized in accordance with ASTM Designation: A 153. All structural steel and plates shall be A36 steel. All exposed metal shall be hot dip galvanized in accordance with ASTM Designation: A 123

907-829.03.1.4--Drilled Shafts.

907-829.03.1.4.1--Drilled Shaft Design. Design of drilled shafts shall be performed by a qualified representative knowledgeable of the design and construction process. The software for analysis and design of drilled shafts under lateral load such as LPile developed by Ensoft, Inc., LCAP and PYSHEET by Virginia Transportation Research Council (VTRC), or any other program approved by the Engineer may be used in the design of drilled shafts.

907-829.03.1.4.2--Installation of Drilled Shafts. Installation of drilled shafts shall be in accordance with Section 803 of the Standard Specifications, except modified below:

(a) Drilled Shaft Load Tests will not be required.
(b) Drilled Shafts will not be measured and paid as a separate pay item.

907-829.03.1.5--Appearance of Wall System. Architectural aesthetic treatment shall be applied to both sides of panels. A form liner shall be used to create an architectural feature of fractured texture on roadway side and brick texture on non-roadway side. The fractured texture shall be similar to Saint Mary's and the brick texture shall be similar to Old Brick by the Scott System, Inc. or approved equal. Color of panels will be selected from an approved manufacturer's standard color selection chart.

907-829.03.1.6--Construction Methods. Construction methods shall meet the following.

1) Prior to beginning earthwork on the project, stake the wall location in the field and establish the final ground line elevations at the noise walls after the roadway has been graded to its final elevation. Use these elevations to develop the shop plans, including a complete elevation view of each wall indicating top and bottom elevations as well as roadway grade. Protect the final ground elevations established in the field for the duration of the project, and do not adjust without prior approval of the Engineer. Keep to a minimum the clearing and grubbing, and trimming of trees as necessary to construct the walls. Any tree trimming or tree removal required shall be considered to be included in the wall contract.
2) Secure joints and connections in such a manner as to be structurally sound with no visible openings for sound transmission or light leaks.
3) Repair marred, chipped, scratched, or spalled areas of walls at no expense to the Department in accordance with the manufacturer's recommendations or at the Engineer's direction.
4) Place trench backfill for wall constructions in accordance with Subsection 203.03.8.6.
5) Dispose of all excess excavation in a manner satisfactory to the Engineer.
6) Tolerances:
   (a) Ensure that vertical alignment for walls and posts is:
   ½ inch for wall heights to 10 feet;
   1 inch for wall heights greater than 10 feet to 20 feet; and 1½ inches for wall heights greater than 20 feet.
   (b) Ensure that horizontal alignment for walls is in reasonably close alignment to that shown in the plans so as to prevent panels from slipping out of the post joints.
   (c) Set post spacing ±½ inch of their intended location.

907-829.03.1.7--Coating for Ground Mounted Noise Walls. The coating for ground mounted noise walls shall meet the following.

1) Description: Coating for color finishing shall be a premium, water-borne, alkali-resistant, pigmented stain formulated with styrene acrylic for concrete surface. Acceptable products shall allow moisture and vapor transmission and shall be formulated for exterior application with resistance to freeze/thaw, moisture, alkali, acid and mildew, mold or fungus, discoloration or degradation. Apply stain in accordance with the manufacturer's recommendations. The stain shall be applied by a manufacturer certified applicator.
2) Materials: Coating system shall be based on a high performance acrylic resin and inorganic pigments. It shall be designed to penetrate concrete surfaces while providing a

breathable, water repellant and color stable concrete protection. The materials shall be delivered in the original sealed containers, clearly marked with the manufacturer's name, brand type of material, batch number, and date of manufacture. Store materials in accordance with the manufacturer's recommendations.

3) Surface Preparation: Surface to which coating is to be applied must be dry and free from dirt, paint, sealers, wax, or other foreign material. In addition, glazed or glossy surfaces must be chemically, acid washed, or mechanically abraded to remove gloss before application of the coating to allow maximum penetration.
4) Application: Coating system on roadway side may be applied by brush or roller for small or edging work or airless spray equipment. Coating system on residential side shall be applied by roller or an approved method to produce a 2-tone painted concrete textured panel in a brick pattern. The coating system shall be applied in two coats until color uniformity, intensity, and complete hiding are achieved. Do not apply coating prior to 28-day concrete cure and surface is dry. Coating shall be applied to all exposed surfaces of units and pre-cast concrete posts.

907-829.03.2--Bridge Mount Noise Walls. The bridge mounted noise walls shall be Sound Zero system fabricated by Manning Company or approved equal and shall be manufactured with the following.

1) General: The bridge mounted noise wall panel shall be a composite, light weight wall system weighting not exceeding 12 PSF intended for structure mounted applications. The panels shall provide a passive restraint system that prevents departure from the structure in the event of an accident.
2) Design: The manufacturer of the noise wall system shall take full responsibility of Engineering theory and calculations correctness and ensuring that all design assumptions for the panels are validated in accordance with AASHTO Standard Specifications for Highway Bridges 1996 and 1998 Interim; and meeting the requirements of Guide Specifications for Structural Design of Sound Barriers 1989.
3) Material:
   (a) Wall Posts: Wall posts shall be W shape shop fabricated from A36 steel and hot dip galvanized in accordance with the requirements of ASTM Designation: A 123.
   (b) Wall panels:
   Sound Zero or approved equal steel core: 2-inch, 18 ga. G-60 galvanized ASTM Designation: A 653, yield strength 35 - 99 ksi, ultimate strength 45 - 57 ksi, minimum I=0.679 in. as manufactured by the Manning Company or approved equal in lengths as required. J-Channel: 1½"x2"x3", 16 ga. G-60 galvanized grade steel as per ASTM Designation: A 526 in lengths as required as manufactured by the Manning Company or approved equal.
   (c) Passive restraint cables: ¼-in diameter galvanized wire rope, ¼-inch diameter 7x19 IPS.RRL.IWRC with a flemish eye loop 3" x 6" at both ends. Cable shall have a minimum one inch of "slack" and a minimum breaking strength of 3.5 tons.
   (d) Lifting insert: ¾-inch diameter nut, galvanized w/flat plate.
   (e) E.P.S board: one pcf expanded polystyrene shall meet federal specification HH-I-524C Type I.

(f) Wind-Devil mechanical fastener: A polypropylene washer designed for the mechanical attachment of insulation as manufactured by Wind-Lock Corporation or approved equal.
(g) Fiberglass reinforcing fabric: 12 oz./sq. yd., with a minimum tensile strength of 300 lbs./in. of width.
(h) Basecoat: An acrylic, latex modified cement-mix ration: 1:1 by weight used to embed fiberglass reinforcing fabric.
(i) Finish:
- A factory mix acrylic texture finish coating with integral color applied to both sides of all panels.
- Stone aggregate, not greater than 3/8 inch clean and washed.
- Painting of all structural steel shall be in accordance with the Department's Standard Specifications.
- Color shall match the color of the ground mounted concrete noise walls.

(j) Anti-Graffiti Protection shall be applied to both sides of panels and posts meeting the requirements of Subsection 907-829.03.3.
(k) Architectural texture finish shall be applied to both sides of panels. An architectural feature of flute texture on roadway side and brick texture on residential side shall be created. The flute texture shall be similar to profile of 1-inch Deep Rib and the brick texture shall be similar to Old Brick by the Scott System.

4) Construction: As indicated on the design contract drawings, approved shop drawings and as follows:

(a) Shop Drawings – Before beginning construction, submit, for approval, shop drawings showing fabrication details; and handling, transportations, and construction procedures for all wall elements including connections.

(b) Installation - Construct structure mounted posts and connections as indicated in the plans and in accordance with manufacturer's recommendations.

(c) Fabrication – Fabricate the panels in an approved plant in accordance with approved drawings and approved quality control plan.

- Fabricate, for approval, a 4' x 4' panel and finish as specified for the full height wall system, and erect at a location specified by the Engineer. Fabricate sample wall by the same process that will be used for all production. Panels not conforming to the approved test sample will be rejected.
- Sound Zero or approved equal steel core units shall be supplied in proper lengths. Each of these units shall be designed to allow an overlap adjustment one to the other to obtain the required overall height of assembled steel core structure. Minimum overlap ¾ inch.
- Pieces shall be fastened together along the overlapping seams, with screws at 24 inches o.c. max.
- J-Channel – shall be placed on both ends to the substrate and secured by welding or screw fastening. All welds shall be "touch-up" with a zinc coating.

- Wire rope with formed loops: 1/4-inch diameter 7 x 19 IPS.RRL.IWRC galvanized wire rope with a minimum breaking strength of 3.5 tons shall be placed as shown on approved shop drawings, with the cables on the community side of the Sound Zero core. Cable shall be a minimum one foot longer than the width of the panel. Loops shall be attached securely to the core by either plastic or steel strapping.
- All surface oils and other foreign materials shall be wiped clean from the steel core structural unit prior to installing panels.
- Insulation, 1 pcf, shall be 2 feet by the full width, perpendicular to the steel core. The insulation shall be fastened using Wind-Devil Fasteners. One per sq. ft.
- Reinforcing fabric: The fiberglass reinforcing mesh shall be embedded into the wet basecoat, to encapsulate all six sides of the panel. The mesh shall be overlapped a minimum of 2½ inches on all sides.
- All edges of the panel shall be coated with an elastomeric prior to finishing either face of the panel.
- The approved finish is then applied to each face of the panel.
- Anti-graffiti primer is then applied to the entire panel, all six sides: Finish coat must be fully cured prior to primer applications.
- Fabrication Tolerances:

Panels (inch)	
Height	+1/4
Length	+1/2
Thickness	+1/4

(d) Handling, storage and transportation: Employ positive means to protect panel edges from damage. Load and ship panels with care as indicated or as per manufacturer's recommendation.

(e) Lift panels so as to minimize strain, distortion or impact loads.

(f) Erection – Install noise barrier wall as indicated as shown on approved shop drawings, and in accordance with the manufacturer's recommendation.

1. Install neoprene pad between base plates of the steel posts. The pad should compress sufficiently to provide uniform bearing for the full length of the panel.
   - Lift panels by the two (2) ¾-inch diameter lifting eyes located in the panel. After installation, the lifting eyes shall be removed and replaced with ¾-inch diameter x ¾-inch galvanized bolt, and washer to seal insert.
   - Once in place, panels shall be field drilled, at holes in post, to secure 5/8-inch diameter A325 bolts through wire rope loops. Passive restraint system as indicated.
   - Sealant: Use a polyurethane sealant to seal the panel to the post flange. Sealant is only required on one side of panel. Color of sealant shall match with the color of panels
2. Erection Tolerances:
   - Vertical alignment for walls and posts to be ¼ inch for all heights to 10 feet, ½ inch for wall heights to 20 feet, and ¾ inch for wall heights greater than 20 feet.

- Posts to be set with +½ inch of the indicated location.

(g) Reject individual panel for any of the following:
   1. Fractures or cracks passing through the panel. All cracked panels will be rejected either at the fabrication shop or at the construction site, even after installation, but prior to acceptance of the project.
   2. Defects that indicate proportioning, mixing and molding not in compliance with the specifications, as specified or indicated.
   3. Damaged ends, which prevent making a satisfactory joint.

(h) Repair and repair procedures require approval by the Engineer.

(l) Technical Assistance: Have a company representative present, full time, at the project site during erection procedures of the noise barriers to assist the fabricator, Contractor, and Engineer. Provide a technical representative to assist in the event unusual problems or special circumstances arise.

907-829.03.3--Graffiti Protection.

907-829.03.3.1--Description. Graffiti protection shall be provided for entire height on both sides of noise walls. The anti-graffiti coating shall be chemically compatible with the sealer coating to be used. Apply clear coatings, unless otherwise specified in the plans or approved by the Engineer. Subject to compliance with manufacturer's recommendations use one of the following or approved equal:

Defacer Erase Graffiti Control; ProSoCo, Inc.
Telephone Number: (913) 281-2700

ENVIROSEAL AG; Harris Specialty Chemicals, Inc.
Telephone Number: (800) 327-1570

Graffiti Guard Tycote Clear Base Coat with Tex coat
Graffiti Guard IIIS-Finish; Texture Coatings of America, Inc.
Telephone Number: (305) 581-0771

907-829.03.3.2--Application. The application process shall meet the following.

(a) Cleaning: Thoroughly clean all surfaces and allow them to dry, according to manufacturer's recommendations, before applying any coatings. Adopt cleaning procedures that will not damage the existing surface texture or coloring.

(b) Surface Preparation: Prepare all surfaces, including primer application, according to manufacturer's recommendations.

(c) Application Rates: Apply all cleaning, priming, and coating products according to manufacturer's recommendations, so that the finished product meets the requirements stated herein below.

907-829.03.3.3--Environmental Restrictions. Use only products meeting Federal, State, and Local environmental restrictions. Do not use products containing Lead, Cadmium, or Chromium.

(a) Volatile Organic Compounds (VOC): Do not use products with a VOC greater than 150 g/L.
(b) Local Condition: Ensure that the humidity and temperature are within acceptable ranges specified by the manufacturer.
(c) Wind Velocity: Protect vehicles or other property from damage resulting from dispersion of the material. Suspend operation until conditions improve enough to permit work to continue without damage.

907-829.03.3.4--Construction. Apply the product so that the completed product meets the following requirements:

Total product life:	Five years
Removal delay period:	Two months

Follow the application and cure time, specified by the manufacturer, to ensure that the coated surface is capable of withstanding graffiti application, spray paint, removal delay period, and cleaning without damage. Observe the proper cleaning procedures, as well as cleaning products, specified by the manufacturer. Use cleaning products that meet the requirements of the environmental restrictions. Ensure that the cleaned surface displays no sign of graffiti "shadows" or "ghosts".

Submit a copy of the Manufacturer's cleaning procedures and recommended cleaning products to the Engineer, before applying any anti-graffiti coating.

907-829.03.3.5--Certification. Furnish the Engineer with three copies of a test report certifying that the material meets all requirements specified above. The Engineer will consider any marked variation from original test values for a material or evidence of inadequate field performance of material to be sufficient evidence that the properties of the material have changed and the material will be removed from the above product list.

907-829.04--Method of Measurement. Noise barrier wall, of the type specified, will be measured for payment by the square foot. The area of measurement shall be calculated from the top of the wall panel to the bottom of the wall panel, and from center to center of post in accordance with the approved shop drawings. Only one side of the barrier wall will be measured for payment.

No separate payment will be made for posts, drilled shafts, testing, excavations, temporary support of excavation, backfill, cast-in-place concrete, reinforcement, joint materials, noise wall coating, graffiti protection, and other incidentals.

907-829.05--Basis of Payment. Noise barrier wall, measured as prescribed above, will be paid for at the contract unit price per square foot, which prices and payment will be full compensation for designing, furnishing all materials, fabricating concrete panels and posts, including all necessary connecting hardware, and constructing the noise wall in place, including any excavation and backfill needed for installing the panels and to adjust for the elevation difference between panels. Payment shall include compensation for all labor, materials, equipment and incidental required to install the wall and erect the wall complete in place to the lines and grade

shown on the approved shop drawings. No direct payment will be made for clearing and grubbing or tree removal in the areas of the noise wall. No separate measurement or payment will be made for installation of drilled shafts for ground mounted noise walls.

Payment will be made under

907-829-A: Ground Mounted Noise Barrier Wall, Contractor Designed -per square foot

907-829-B: Bridge Mounted Noise Barrier Wall, Contractor Designed -per square foot

Interchange Construction on I-110 at Popps Ferry Rd. and Boney Ave., known as Federal Aid Project No. NHS-0010-01(145) / 105281302 in Harrison County.

ADDENDUM

STATE	PROJECT NO.
MISS.	NHS-0010-01(145)

GENERAL NOTES

1. A SOIL PROFILE HAS BEEN PREPARED FOR THIS PROJECT USING SAMPLES TAKEN FROM HOLES AT THE LOCATIONS INDICATED IN THE TEST REPORTS. THIS SOIL PROFILE IS ON FILE IN THE DISTRICT AND CENTRAL CONSTRUCTION OFFICES AND IS AVAILABLE FOR EXAMINATION. THE DEPARTMENT DOES NOT GUARANTEE THAT THE MATERIALS AS SHOWN IN THE REPORTS ARE NECESSARILY TO BE FOUND OUTSIDE THE TEST HOLES.

2. UTILITIES ON THE DRAWINGS ARE SHOWN IN THEIR ORIGINAL LOCATION BASED UPON THE BEST INFORMATION AVAILABLE TO THE ENGINEER. UTILITIES THAT WERE FOUND TO BE IN CONFLICT WITH CONSTRUCTION HAVE BEEN RELOCATED. PERMITS ARE ON FILE WITH THE DEPARTMENT SHOWING THE APPROXIMATE LOCATION OF UTILITIES RELOCATED WITHIN THE RIGHT-OF-WAY. THE ENGINEER CAN NOT AND DOES NOT WARRANT THAT THIS INFORMATION IS COMPLETE OR ACCURATE. THE CONTRACTOR MUST COORDINATE DIRECTLY WITH THE INVOLVED UTILITY OWNERS TO HAVE UNDERGROUND UTILITY LINES FIELD LOCATED IN ADVANCE OF CONSTRUCTION.

3. THE CONTRACTOR IS RESPONSIBLE FOR FIELD VERIFICATION OF EXISTING GRADES AND MAKING ADJUSTMENTS AS NECESSARY WITH THE APPROVAL OF THE PROJECT ENGINEER.

4. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING EXISTING STRUCTURES SUCH AS, BUT NOT LIMITED TO, PIPES, INLETS, APRONS, AND BRIDGES FROM DAMAGE WHICH MIGHT OCCUR DURING CONSTRUCTION. THE CONTRACTOR SHALL REPLACE OR REPAIR, AS DIRECTED BY THE ENGINEER, ANY STRUCTURES DAMAGED DURING THE LIFE OF THE CONTRACT. NO PAYMENT WILL BE MADE FOR REPLACEMENT OR REPAIR OF DAMAGED ITEMS.

5. WORK ON STRUCTURES FOR THIS PROJECT REQUIRES EXCAVATION IN THE IMMEDIATE VICINITY OF TRAFFIC AND ADJACENT PROPERTIES. THEREFORE, THE RISK OF A FAILURE OCCURRING DURING EXCAVATION REQUIRES THAT EXTREME CAUTION BE EXERCISED. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PLACING WHAT BRACING, SHORING, OR GROUND SUPPORT SYSTEM THAT IS DEEMED NECESSARY TO PREVENT A FAILURE AND PROTECT THE PERSONS WORKING NEAR THE EXCAVATION, THE PUBLIC THAT MAY BE ABOVE THE EXCAVATION OR ANY STRUCTURES ADJACENT TO THE EXCAVATION. ALL COSTS FOR DESIGNING, DRAWING, AND CONSTRUCTING THE FACILITY SHALL BE INCLUDED IN THE PRICE BID FOR CONTRACT ITEMS.

6. REMOVAL OF RAISED PAVEMENT MARKERS THAT ARE IN CONFLICT WITH REQUIRED CONSTRUCTION IS NOT CONSIDERED A SEPARATE PAY ITEM. COST TO BE ABSORBED IN OTHER ITEMS BID.

7. TEMPORARY STRIPING SHALL CONFORM TO FINISHED STRIPE SPECIFICATIONS FOR ALIGNMENT, NEATNESS, AND STRAIGHTNESS.

8. FLUORESCENT ORANGE SHEETING SHALL BE USED ON ALL CONSTRUCTION AND TRAFFIC CONTROL SIGNS EXCEPT FOR THOSE DESIGNATED ON THE PLANS TO BE BLACK LEGEND AND BORDER ON WHITE BACKGROUND.

9. THE LOCATION AND SPACING OF SIGNS SHALL BE VERIFIED IN THE FIELD PRIOR TO FABRICATION.

10. ALL POST LENGTHS FOR SIGNS SHALL BE VERIFIED IN THE FIELD PRIOR TO FABRICATION.

11. SOME WORK IS REQUIRED OUTSIDE THE PROJECT LIMITS. NO ADDITIONAL COMPENSATION WILL BE MADE FOR SUCH WORK EXCEPT AS PROVIDED BY SPECIFIC PAY ITEMS INCLUDED IN THE PLANS.

12. THE EROSION CONTROL DEVICES REFERENCED IN THESE PLANS ARE A MINIMUM REQUIREMENT. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ENSURE THAT SILT DOES NOT LEAVE THE RIGHT OF WAY OR CONTAMINATE WATERS OF THE U. S. DURING CONSTRUCTION. THE CONTRACTOR SHALL SUBMIT AN EROSION CONTROL PLAN AT THE PRE-CONSTRUCTION CONFERENCE OR PRIOR TO COMMENCEMENT OF WORK AND MAINTAIN THE PLAN DURING CONSTRUCTION. ANY ADDITIONAL SILT BASINS NOT SHOWN IN THE PLANS SHALL BE INCLUDED IN THE CONTRACTOR'S EROSION CONTROL PLAN PRIOR TO SUBMITTING FOR APPROVAL.

13. ALL TRAFFIC CONTROL DEVICES ON THIS PROJECT SHALL COMPLY WITH PART VI OF THE MUTCD (LATEST EDITION).

14. TRAFFIC SIGNAL POLES SHALL BE DESIGNED IN ACCORDANCE WITH THE 2001 AASHTO SPECIFICATIONS, AS AMENDED. BASIC WIND SPEED FOR THIS PROJECT SHALL BE 140 MPH. DESIGN LIFE SHALL BE 50 YEARS. FATIGUE CATEGORY SHALL BE II. GALLOPING AND TRUCK INDUCED WIND LOADS SHALL NOT BE CONSIDERED. ICE LOADS FOR THIS PROJECT WILL NOT BE CONSIDERED. ANY DEVIATION FROM THESE CRITERIA MUST BE APPROVED IN WRITING BY THE TRAFFIC ENGINEERING DIVISION, 601-359-1454.

15. VOIDS CREATED BY THE REMOVAL OF, BUT NOT LIMITED TO, POSTS, CONCRETE ANCHORS, AND FOOTINGS SHALL BE BACKFILLED AND TAMPED IN ACCORDANCE WITH SECTION 203 OF THE MISSISSIPPI STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.

16. PRIOR TO EARTHWORK OPERATIONS, THE EXISTING TOP 4" TOPSOIL IS TO BE STRIPPED AND STOCKPILED. AFTER THE GRADING OPERATIONS ARE COMPLETED, SAID TOPSOIL SHALL BE PLACED ON ALL AREAS THAT ARE NOT TO BE PAVED OR OTHERWISE PROTECTED, IN ACCORDANCE WITH SECTION 211 OF THE SPECIFICATIONS, OR THE VEGETATION SCHEDULE (SEE WK. SH. VS-1). TOPSOIL SHALL BE DRESSED VERTICALLY WITH A BULLDOZER OR OTHER TRACK EQUIPMENT AT THE TIME OF PLACEMENT. EXISTING TOPSOIL AND ALL COSTS ASSOCIATED WITH STRIPPING, HAULING, STOCKPILING, AND PLACEMENT OF THE EXISTING TOPSOIL IS TO BE ABSORBED IN OTHER EARTHWORK ITEMS.

17. ROADWAY SIGNS THAT ARE IN CONFLICT WITH CONSTRUCTION OF THIS PROJECT SHALL BE REMOVED AND RELOCATED BY THE CONTRACTOR AS DIRECTED BY THE ENGINEER, THE COST OF WHICH SHALL BE ABSORBED IN OTHER ITEMS BID.

GENERAL NOTES (CONT.)

18. WHERE MILLING IS REQUIRED, THE CONTRACTOR SHALL PROVIDE OUTLETS IN THE EXISTING SHOULDERS AT SUFFICIENT INTERVALS TO PREVENT POOLING OR STANDING WATER ON THE MILLED SURFACE, THE COST OF WHICH SHALL BE ABSORBED IN OTHER ITEMS BID.

19. EXISTING PIPES THAT ARE TO BE ABANDONED IN PLACE SHALL BE PLUGGED WITH CONCRETE (ABSORBED ITEM).

20. ALL ITEMS OF WORK ASSOCIATED WITH THE INSTALLATION OF A CONSTRUCTION ENTRANCE SHALL BE ABSORBED IN OTHER ITEMS OF WORK.

21. THE LOCATION AND SPACING OF SIGNS, SHOWN ON THE TRAFFIC CONTROL PLANS, ARE APPROXIMATE AND MAY BE ADJUSTED AS NECESSARY TO FIT FIELD CONDITIONS.

22. ALL PLASTIC DRUMS SHALL HAVE A BALLASTING COLLAR MADE FROM RECYCLED TRUCK TIRES OR OTHER SUITABLE MATERIAL.

23. PRIOR TO POURING PAVED ISLANDS, THE ENGINEER SHALL BE NOTIFIED SO THAT SIGNS REQUIRED IN ISLANDS CAN BE LOCATED.

24. 25% SHRINKAGE FACTOR USED IN THE EARTHWORK CALCULATIONS IS FOR DESIGN ESTIMATING PURPOSES ONLY.

25. ALL PIPE JOINTS ARE TO BE WRAPPED IN 24-INCH WIDE TYPE V GEOTEXTILE FABRIC. ALL PICKUP HOLES SHALL BE PLUGGED AND COVERED WITH TYPE V GEOTEXTILE FABRIC , THE COST OF WHICH SHALL BE ABSORBED IN OTHER BID ITEMS.

26. FOR LIST OF PUBLIC UTILITIES, SEE WORKING NO. WK-3.

27. FULL COLLARS ARE TO BE USED AT ALL BOX CULVERT EXTENSIONS AND AT ALL BOX CULVERT CONSTRUCTION JOINTS. (SEE WK. NO. ICJ-1 FOR DETAILS

28. REMOVAL OF OBJECT MARKERS IS NOT CONSIDERED A SEPARATE PAY ITEM, AND SHALL BE ABSORBED IN OTHER ITEMS BID.

29. ERECTION DATES ARE TO BE LEGIBLY WRITTEN ON THE BACK OF ALL SIGNS WITH A SANFORD MEANSTREAK WATERPROOF FORMULA PERMANENT MARKING STICK.

30. IF COLORS ARE USED ON PLAN/PROFILE SHEETS, THEY ARE INTENDED TO VISUALLY EASE THE LOCATION OF ELEMENTS FOR USERS OF THESE DRAWINGS. ALTHOUGH THE INTENT IS TO CATEGORIZE EVERYTHING AS EITHER EXISTING OR PROPOSED, IT IS THE END USER'S RESPONSIBILITY TO ENSURE ALL ELEMENTS ARE INTERPRETED CORRECTLY REGARDLESS OF COLOR.

31. DEMOLITION OF THE EXISTING BIG RIDGE ROAD BRIDGE WILL REQUIRE CLOSURE OF I-110. CLOSURE OF I-110 WILL ONLY BE PERMITTED BETWEEN THE HOURS OF 7:00 PM AND 9:00 AM SATURDAY THROUGH SUNDAY. A LANE RENTAL FEE OF $10,000.00 PER FULL OR PARTIAL HOUR SHALL BE ASSESSED FOR CLOSURES OR OBSTRUCTIONS THAT EXTEND BEYOND THE TIMES MENTIONED ABOVE. SEE NOTICE TO BIDDERS FOR "LANE CLOSURE RESTRICTIONS" FOR MORE INFORMATION.

⚠ 32. THE FACE OF THE NOISE BARRIER WALL SHALL BE CONTRACTOR DESIGNED ACCORDING TO SPECIAL PROVISION 907-829-2. THE CONCRETE FACE OF THE NOISE BARRIER WALL SHALL HAVE A TEXTURED STONE BLCOK PATTERN FINISH. THE SIZE OF THE BLOCKS SHALL BE SIMILAR TO THE SIZE OF THE BLOCKS USED IN THE CONTRACTOR DESIGNED MSE WALL IN PROJECT NHS-0010-01(144). THE CONTRACTOR SHALL SUBMIT CATALOG-CUTS AND SPECIFICATIONS FOR THE PATTERN AND METHOD OF OBTAINING THE TEXTURED FINISH TO THE DIRECTOR OF STRUCTURES, STATE BRIDGE ENGINEER FOR APPROVAL PRIOR TO PLACING CONCRETE.

907-829-A002	GROUND MOUNTED NOISE BARRIER WALL, CONTRACTOR DESIGNED	SF	9092		(1)

(1) SIGNAL HEAD TO BE BLACK WITH BACKPLATES.

(2) ALL CONTROLLER CABINETS SHALL HAVE A REAR DOOR AND LAPTOP TRAY.

(3) MMU AND CONTROLLERS SHALL BE ETHERNET READY AND COMPATABLE WITH MDOT'S EXISTING TRAFFIC SIGNAL MANAGEMENT SOFTWARE. CONTROLLER PAY ITEM SHALL INCLUDE A 5-SLOT PRE-WIRED CARD RACK AND 175 WATT MINIMUM POWER SUPPLY IN THE CABINET.

(4) POWER SERVICE METER SHALL NOT BE INSTALLED ON CONTROLLER CABINET OR MAST ARM POLE. IT SHALL BE INSTALLED ON A RISER AS SHOWN ON TSD-5.

(5) PHASE SELECTOR SHALL BE SECURITY CODED.

(6) VIDEO DETECTOR CABLE TO BE ABSORBED INTO PAY ITEM.

(7) RADIOS TO BE COMPATIBLE WITH EXISTING MDS TRANSNET 900 RADIO SYSTEM PRESENT AT THE MASTER (MS67@LICKSKILLET).

(8) CONTRACTOR SHALL MAKE THE APPLICATION FOR POWER SERVICE, COORDINATIONG WITH CITY OFFICALS, IN ADVANCE OF REQUIRING THE ELECTRICAL SERVICE, POWER CABLE, CONDUIT AND INCIDENTALS NECESSARY FOR POWER SUPPLY OF POWER. TO BE COST ABSORBED.

(9) SIGNAL POLES TO BE GALVANIZED.

(10) THIS POLE TO BE DESIGNED TO ACCOMMODATE A FUTURE 35' ARM FOR THE SOUTHBOUND APPROACH AT THE OFF-RAMP, INCLUDING TWO HEADS WITH BACKPLATES, AN OPTICAL DETECTOR, AND A VIDEO CAMER IN THE ANALYSIS. 35' ARM NOT TO BE INCLUDED ON THIS PROJECT.

(11) TRAFFIC SIGNAL POWER CABLE

(12) INCLUDES 180 TONS FOR TYPE D SILT BASINS AND 548 TONS FOR DRAINAGE.

MISS.	NHS-0010-01(145)

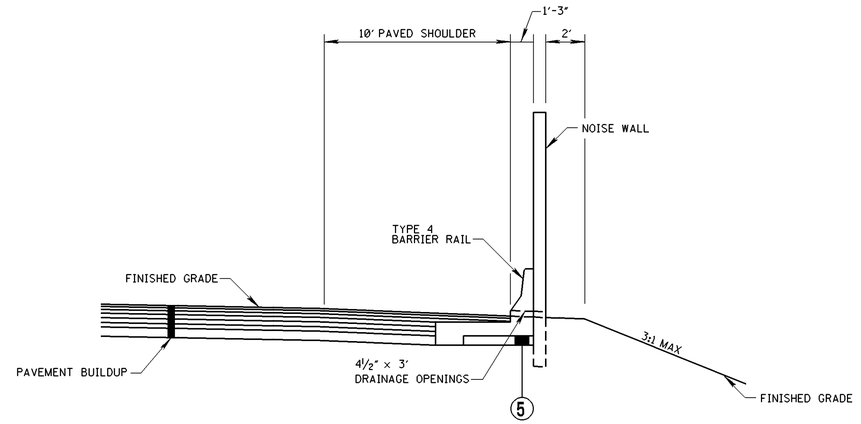
4½" x 5" DRAINAGE OPENINGS TO BE PLACED AT EACH SAG POINT, 50' EACH SIDE OF SAG POINTS AND AT 100' INTERVALS THEREAFTER, WHERE THE FLOW OF SURFACE WATER RUNOFF IS TOWARD THE BARRIER. REINFORCING STEEL SHALL BE ADJUSTED TO PROVIDE A 2" CLEARANCE OVER THE OPENING. OPENINGS SHALL BE PROVIDED IN THE NOISE BARRIER IN LOCATIONS THAT CORRESPOND WITH OPENINGS IN THE BARRER RAIL.

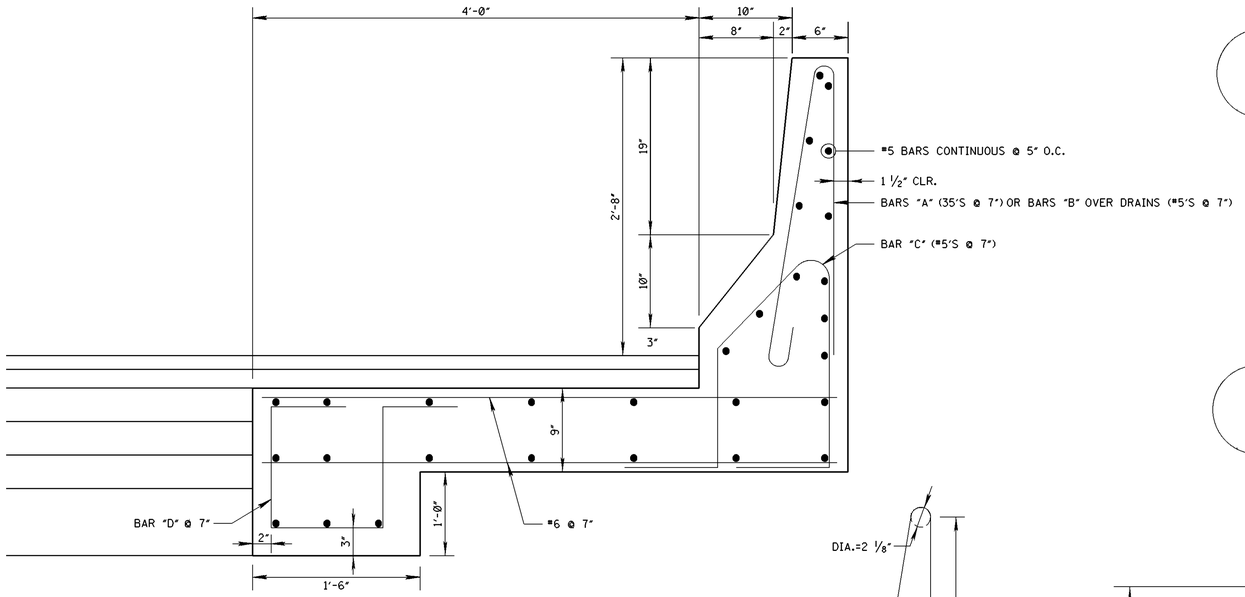
TYPE 4 BARRIER RAIL
N.T.S.

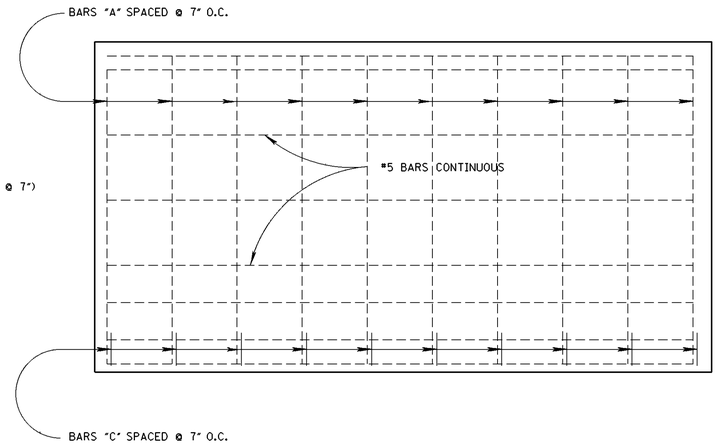
I-110
STA. 361+57.100 TO STA. 371+00.000 RT



SECTION A-A

⑤ 6.00" CRUSHED STONE BASE (825B)

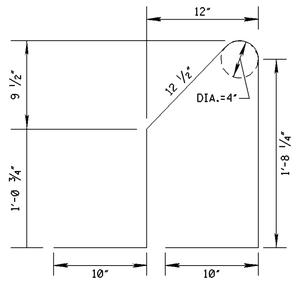




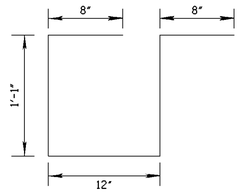
GENERAL NOTES

1. CONCRETE SHALL BE CLASS "B".
2. REINFORCING STEEL SHALL EXTEND THROUGH CONSTRUCTION JOINTS.
3. JOINTS
   A. CONSTRUCTION JOINTS REQ'D. AT 20' O.C.
      1. 3/4" CHAMFER REQ'D. FROM THE BASE TO TOP OF WALL CHAMFER MAY BE FORMED OR SCORED.
      2. LONGITUDINAL REIN. SHALL CONTINUE AT CONTRACTION JOINTS.
   B. EXPANSION JOINTS REQ'D. AT 60' O.C.
      1. 3/4" CHAMFER REQ'D. FROM THE BASE TO TOP OF WALL CHAMFER MAY BE FORMED OR SCORED.
      2. 1" X 2'-0" SMOOTH DOWELS SPACED WITH EACH HORIZONTAL BAR IN WALL. PROVIDE 1" X 1'-2" D-15 PAPER TUBING ON EACH DOWEL.
      3. EXPANSION JOINTS ARE REQ'D. TO BE EQUALLY SPACED @ 60' O.C. INTERVALS ALONG THE RAIL. JOINTS WILL BE OMITTED IN AREAS ADJACENT TO THE DRAINAGE INLETS. JOINTS IN THE MOMENT SLAB TO BE LOCATED TO COINCIDE WITH THE JOINTS IN THE RAIL.

#5'S BAR A



#5'S BAR C
(OMITTED @ DRAIN OPENINGS)



#4'S BAR "D"
