S E C T I O N 9 0 5 -- P R O P O S A L (CONTINUED)

I (We) further propose to execute the attached contract agreement (Section 902) as soon as the work is awarded to me (us), and to begin and complete the work within the time limit(s) provided for in the Specifications and Advertisement. I (We) also propose to execute the attached contract bond (Section 903) in an amount not less than one hundred (100) percent of the total of my (our) part, but also to guarantee the excellence of both workmanship and materials until the work is finally accepted.

I (We) enclose a certified check, cashier's check or bid bond for **five percent (5%) of total bid** and hereby agree that in case of my (our) failure to execute the contract and furnish bond within Ten (10) days after notice of award, the amount of this check (bid bond) will be forfeited to the State of Mississippi as liquidated damages arising out of my (our) failure to execute the contract as proposed. It is understood that in case I am (we are) not awarded the work, the check will be returned as provided in the Specifications.

Bidder acknowledges receipt of and has added to and made a part of the proposal and contract documents the following addendum (addenda):

The following is my (our) itemized proposal.

MISSISSIPPI DEPARTMENT OF TRANSPORTATION

TABLE OF CONTENTS

PROJECT: BR-0019-02(041) / 105189301 – Marshall County

- CONTINUED ON NEXT PAGE -

907-109-6: Measurement and Payment
907-110-2: Wage Rates
907-216-1: Solid Sodding
907-225-3: Grassing
907-226-2: Temporary Grassing
907-227-10: Hydroseeding
907-234-5: Siltation Barriers
907-237-4: Wattles
907-245-2: Triangular Silt Dikes
907-246-3: Sandbags & Rockbags
907-249-1: Riprap for Erosion Control
907-304-13: Granular Courses
907-307-4: Lime Treated Courses
907-308-4: Portland Cement Treated Courses
907-311-3: Lime-Fly Ash Treated Courses
907-401-2: Hot Mix Asphalt (HMA), w/ Supplement
907-401-6: Warm Mix Asphalt(WMA)
907-403-4: Hot Mix Asphalt (HMA), w/ Supplement
907-403-12: Warm Mix Asphalt (WMA)
907-407-1: Tack Coat
907-413-5: Sawing & Sealing Transverse Joints in Asphalt Pavement
907-601-1: Structural Concrete
907-603-8: Culverts & Storm Drains
907-605-3: Underdrains
907-617-2: Right-of-Way Markers
907-618-9: Placement of Temporary Traffic Stripe
907-626-5: Inverted Profile Thermoplastic Traffic Stripe
907-626-25: Thermoplastic Traffic Markings
907-631-1: Flowable Fill
907-699-4: Construction Stakes
907-701-4: Hydraulic Cement
907-702-3: Polyphosphoric Acid (PPA) Modification of Petroleum Asphalt Cement
907-703-11: Aggregates
907-707-5: Joint Material
907-708-6: Non-Metal Drainage Structures
907-709-1: Metal Pipe
907-710-1: Fast Dry Solvent Traffic Paint
907-711-4: Snythetic Structural Fiber Reinforcement
907-713-3: Admixtures for Concrete
907-714-8: Miscellaneous Materials
907-715-4: Roadside Development Materials
907-720-2: Pavement Marking Materials
907-804-13: Concrete Bridges and Structures, w/ Supplement

906-7: Training Special Provision

MISSISSIPPI DEPARTMENT OF TRANSPORTATION

SECTION 904- NOTICE TO BIDDERS NO. 4658 **CODE: (SP)**

DATE: 10/11/2013

SUBJECT: Steel Pile Grade

PROJECT: BR-0019-02 (041) / 105189301 – Marshall County

The Contractor is hereby advised that bridge steel piles shall be A.S.T.M. A709, Grade 50. The Bridge plans do not carry a note regarding the required grade. Special bid considerations should be taken as a result of this material.

MISSISSIPPI DEPARTMENT OF TRANSPORTATION

SECTION 904 - NOTICE TO BIDDERS NO. 4662 **CODE: (SP)**

DATE: 10/16/2013

SUBJECT: Plan General Note Correction

PROJECT: BR-0019-02(041) / 105189301 – Marshall County

Bidders are hereby advised that General Note No. 20 shown on Plan Sheet No. 4, Working Sheet No. GN-1, is hereby revised as follows.

(20) CLEARING IN WETLANDS IS LIMITED TO TEN (10) FEET BEYOND CONSTRUCTION LIMITS EXCEPT UNDER BRIDGES AND IN SIGHT FLARES. CLEARING ADJACENT TO THE BRIDGES (IN WETLANDS) IS LIMITED TO WITHIN TWENTY-FIVE (25) FEET ON ONE SIDE OF THE CENTERLINE AND FIFTY (50) FEET ON THE OTHER SIDE OF THE CENTERLINE. WITHIN THIS SEVENTY-FIVE (75) FOOT WIDE AREA, THE CONTRACTOR SHALL BE PERMITTED TO CONSTRUCT A TEMPORARY HAUL ROAD. UPON COMPLETION OF THE BRIDGE, THIS ROAD SHALL BE REMOVED BY THE CONTRACTOR TO NATURAL GROUND ELEVATION. ALL COSTS ASSOCIATED WITH THE HAUL ROAD ARE TO BE INCLUDED IN OTHER BID ITEMS. ADDITIONAL CLEARING IN THE VICINITY OF THE BRIDGE, OUTSIDE THE SEVENTY-FIVE (75) FOOT WIDE AREA IS TO BE DONE WITH SAWS ONLY (NO DOZERS OR OTHER MECHANIZED CLEARING WHICH WILL DISTURB THE NATURAL GROUND SURFACE.)

Bridge Replacements on SR 7 at Bridge Nos. 154.0, 154.8, 155.0, known as Federal Aid Project No. BR-0019-02(041) / 105189301 in Marshall County.

ADDENDUM

GENERAL NOTES

(24) THE EROSION CONTROL DEVICES REFERENCED IN THESE PLANS ARE A MINIMUM REQUIREMENT. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO ENSURE THAT SILT DOES NOT LEAVE THE RIGHT OF WAY OR CONTAMINATE WATERS OF THE U. S. DURING CONSTRUCTION. THE CONTRACTOR SHALL SUBMIT AN EROSION CONTROL PLAN PRIOR TO COMMENCEMENT OF WORK AND MAINTAIN THE PLAN DURING CONSTRUCTION. ANY ADDITIONAL SILT BASINS NOT SHOWN IN THE PLANS SHALL BE INCLUDED IN THE CONTRACTOR'S EROSION CONTROL PLAN PRIOR TO SUBMITTING FOR APPROVAL.

(25) THE CONTRACTOR IS RESPONSIBLE FOR FIELD-VERIFICATION OF EXISTING GRADES AND MAKING ADJUSTMENTS AS NECESSARY WITH THE APPROVAL OF THE PROJECT ENGINEER.

(26) TEMPORARY STRIPING SHALL CONFORM TO FINISHED STRIPE SPECIFICATIONS FOR ALIGNMENT, NEATNESS, AND STRAIGHTNESS.

(27) ALL ITEMS OF WORK ASSOCIATED WITH THE INSTALLATION OF A CONSTRUCTION ENTRANCE SHALL BE ABSORBED IN OTHER ITEMS OF WORK.

(28) IF COLORS ARE USED ON PLAN/PROFILE SHEETS, THEY ARE INTENDED TO VISUALLY EASE THE LOCATION OF ELEMENTS FOR USERS OF THESE DRAWINGS. ALTHOUGH THE INTENT IS TO CATEGORIZE EVERYTHING AS EITHER EXISTING OR PROPOSED, IT IS THE END USER'S RESPONSIBILITY TO ENSURE ALL ELEMENTS ARE INTERPRETED CORRECTLY REGARDLESS OF COLOR.

(29) SEE BRIDGE PLANS FOR DETAILED INDEX SHEET(S), ESTIMATED AND SUMMARY OF QUANTITY SHEETS, AND EROSION CONTROL SHEETS.

(30) THE CLEARING LIMITS ADJACENT TO THE STREAMS AT STATIONS 231+70, 275+00, AND 283+00 WILL BE LIMITED TO NO FURTHER THAN TEN (10) FEET OUTSIDE THE CONSTRUCTION LIMITS WHEN ANY CLOSER TO THE STREAM THAN FIFTY (50) FEET FROM THE TOP OF THE BANKS.

1

(32) ALL ADDENDA TO THESE PLANS WILL BE POSTED TO WWW.MDOT.MS.GOV UNDER THE PROPOSAL ADDENDA COLUMN. BIDDERS ARE ADVISED THAT HARD COPIES OF ANY ADDENDA FOR THIS PROJECT WILL NOT BE MAILED. IT IS THE BIDDER'S RESPONSIBILITY TO CHECK AND SEE IF ANY ADDENDA HAVE BEEN POSTED FOR THIS PROJECT.

(33) BIDDERS ARE ADVISED THAT HARD COPIES OF ANY ADDENDA FOR THIS PROJECT WILL NO LONGER BE MAILED. ALL ADDENDA FOR THIS PROJECT WILL BE POSTED TO WWW.MDOT.MS.GOV UNDER THE PROPOSAL ADDENDA COLUMN. IT IS THE BIDDER'S RESPONSIBILITY TO CHECK AND SEE IF ANY ADDENDA HAVE BEEN POSTED FOR THIS PROJECT. PLEASE CONTACT CONTRACT ADMINISTRATION DIVISION AT 601-359-7700 FOR ANY QUESTIONS REGARDING ELECTRONIC ADDENDA.

① ALL AREAS THAT HAVE BEEN VEGETATED, UNDER THIS CONTRACT FOR AT LEAST (60) SIXTY DAYS, SHALL RECEIVE ADDITIONAL APPLICATION(S) OF FERTILIZER(S) OF THE TYPE(S) AND RATE(S) OF APPLICATIONS AS DETERMINED BY SOIL TESTS OR AS DIRECTED DURING THE GROWING SEASONS THE CONTRACT IS IN FORCE. GROUND PREPARATION WILL NOT BE REQUIRED FOR THE ADDITIONAL APPLICATIONS. PAYMENT FOR ALL FERTILIZERS ACCEPTABLY APPLIED AS AN ADDITIONAL APPLICATION(S) WILL BE MADE IN ACCORDANCE WITH SUPERPHOSPHATE BID ITEM 213-C001.

② PROPOSAL QUANTITIES ESTIMATED ON THE BASIS THAT 100% OF THE ACREAGE WILL BE SEEDED.

③ PROPOSAL QUANTITIES ESTIMATED ON THE BASIS THAT 50% OF THE ACREAGE WILL BE SEEDED.

④ QUANTITY ESTIMATED ON THE BASIS 50% OF THE ACREAGE VEGETATED MAY REQUIRE TREATMENT.

CARTER D. BEARDEN LICENSED PROFESSIONAL ENGINEER 18834 STATE OF MISSISSIPPI
DATE: 8/29/13

ADDENDUM

STATE	PROJECT NO.
MISS.	BR-019-02(041)

GENERAL NOTES:

Specifications: Mississippi Standard Specifications For Road and Bridge Construction, 2004.

No change of plans will be permitted except by written approval of the Director of Structures, State Bridge Engineer. Minor changes in detail of design or construction procedure may be authorized by the Director of Structures, State Bridge Engineer provided such changes will not be cause for contract price adjustment.

The final surface texture of the bridge deck shall be mechanically transverse grooved in accordance with Sections 501 And 804 of the specifications. See Misc. Span Details for limits of transverse grooving on bridge deck.

Bridge concrete shall be Class "AA".

Railing expansion joint material shall be bituminous fiber type unless otherwise noted.

No payment will be allowed for excavation incidental to the construction of end bents.

Bar bending details shall be in accordance with "Manual of Standard Practice for Detailing Reinforced Concrete Structures" (ACI 315R-94).

Reinforcement order lists and required placing plans shall be furnished in accordance with Section 805 of the Mississippi Standard Specifications. Partial submittals are not acceptable.

Shop drawings of prestressed beams, including an erection plan, shall be submitted in duplicate to the Director of Structures, State Bridge Engineer for approval prior to the manufacture of beams.

Concrete surfaces shall receive a Class 2 rubbed or spray finish in accordance with the specifications.

Reinforcing steel shall be ASTM A615, Grade 60, unless otherwise noted.

Work for which no pay item is provided in the proposal will not be paid for directly and compensation therefore will be included in the prices and payments for bid items.

⚠1 An extra dead load of 18 p.s.f. is incorporated into the design of this structure to accommodate the use of steel stay-in-place forms.

P/S CONCRETE GIRDER BRIDGE:

The girder deflection diagrams shown in these plans were prepared and intended for design and estimation purposes only. Actual bridge girder deflections may differ from the deflection diagrams shown in these plans.

It is the Contractor's responsibility to construct the bridge to meet the requirements of the plans and specifications including, but not limited to, the requirements for bridge deck smoothness.

Prior to formwork construction, the Contractor shall submit three (3) copies of a proposed BRIDGE SUPERSTRUCTURE CONSTRUCTION PLAN to the Director of Structures, State Bridge Engineer for review, through the Project Engineer. This submittal shall include all calculations, assumptions and parameters used by the Contractor to determine bridge girder deflections and form grade elevations. This submittal shall also include an erection and construction procedure that addresses the construction means and methodologies used by the Contractor and shall consider effects including, but not limited to, construction phasing, pouring schedules, applied permanent and construction loading, and shall include calculations and details of temporary girder bracing systems used to ensure girder stability and to counter the effects of girder tilt.

After girder erection and prior to deck construction, the Contractor shall submit deck thickness verification calculations for each girder. These calculations shall include a comparison of the erected girder top flange profiles versus the plan deck grade elevations over each girder plus the anticipated girder deflection due to applied permanent dead load and creep.

Three (3) copies of the deck thickness verification calculations and any proposed remediation measures to correct for thin deck areas shall be submitted to the Director of Structures, State Bridge Engineer for review, through the Project Engineer.

The BRIDGE SUPERSTRUCTURE CONSTRUCTION PLAN and the deck thickness verification calculations shall be prepared and stamped by a Mississippi Registered Professional Engineer.

PILE NOTES:

Test piles shall be driven as permanent piles at the location shown in the PDA TEST PILE SCHEDULE and will be paid for as test piles only.

The Director of Structures, State Bridge Engineer may authorize test piles driven outside the structural limits.

Test piles shall be driven as a continuous operation, to the bearing capacity and the minimum ground penetration shown in the PDA TEST PILE SCHEDULE, unless otherwise directed by the Director of Structures, State Bridge Engineer.

Permanent piles shall be driven to an elevation no higher than the elevation shown in the REQUIRED ULTIMATE PILE BEARING CAPACITY AND TIP ELEVATION SCHEDULE.

The tip elevation of piling, for hydraulic structures, may be determined by the scour line.

When feasible, bearing piles shall be driven full length and be spliced, only, as approved by the Director of Structures, State Bridge Engineer.

Welding shall be done by the ELECTRIC ARC process. Welders shall be certified and electrodes shall be approved.

When loading tests are required, the maximum test load shall be one and one half (1 1/2) times the minimum pile bearing capacity.

PDA test piles shall require a 1 day and 7 day restrike unless otherwise directed by the Engineer.

Pile lengths and driving criteria shall be provided based on the results of the PDA test piles.

The required ultimate pile bearing shown in the REQUIRED ULTIMATE PILE BEARING AND TIP ELEVATION SCHEDULE includes the LRFD resistance factor for PDA of 0.65.

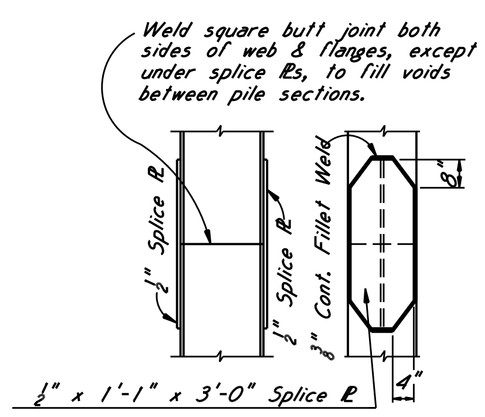
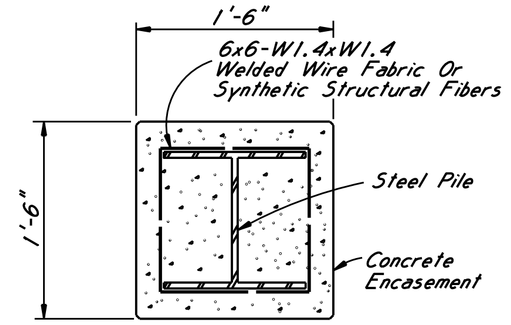
PILE ENCASEMENT DETAIL



PILE SPLICE DETAIL
HP14x89 Steel Piles
HP14x117 Steel Piles



NOTE: Concrete for pile encasement shall be Class "AA" and will be paid for as bridge concrete.
Class "AA" concrete with #67 aggregate may be used for pile encasement.
Pile encasement shall be reinforced with 6x6-W1.4xW1.4 welded wire fabric weighing 0.21 Lbs. Per Sq. Ft. (not a separate pay item) or synthetic structural fiber applied at a dosage rate of 4 Lbs. per cubic yd. Synthetic structural fiber shall meet requirements of special provision No. 907-711 (not a separate pay item).
Chamfer corners of encasement ¾".

BAR BENDING DETAILS
Dimensions Are Out To Out

NEOPRENE PAD DETAILS
In No Case Shall Neoprene Pads Be Field Cut. Bearing Area On Top Of Cap Shall Be Cast Smooth And True To Grade.

GENERAL NOTES:

Beams shall be manufactured in accordance with Mississippi Standard Specification For Road & Bridge Construction, 2004.
The tops of beams shall be rough floated. At approximately the time of initial set the entire tops of beams shall be scrubbed transversely with a coarse wire brush to remove all laitance and produce a roughened surface for bonding slab. Other surfaces shall be finished per specifications.
Strand pattern detailed is for ½"ø270 K-LR strands. Shop drawings of prestressed beams shall include the type and location of all strands.
The Director Of Structures, State Bridge Engineer shall be notified if the camber of the beam is not within the limits shown in table.
Concrete shall be class "FX" and:
(a) Shall have a 28-day cylinder strength of 6000 p.s.i.
(b) At transfer of the tensioning load, the cylinder strength of the concrete shall be as shown in table.
At the contractor's request a suggested concrete design mix will be furnished with the understanding that it is the contractor's responsibility to maintain 6000 p.s.i. concrete.
If any cylinder tests below 6000 p.s.i., the beam represented will be held on the yard until the 28-day strength is determined and acceptance or rejection has been established.

DESIGN DATA

Unit stresses are in accordance with A.A.S.H.T.O. LRFD, 2012
An extra dead load of 18 p.s.f. is incorporated into the design of this structure to accommodate the use of steel stay-in-place forms.

L.R Indicates Low-Relaxation Strands

PRESTRESS REQUIREMENTS

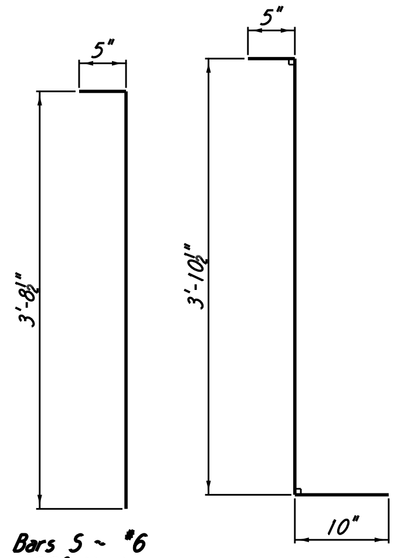
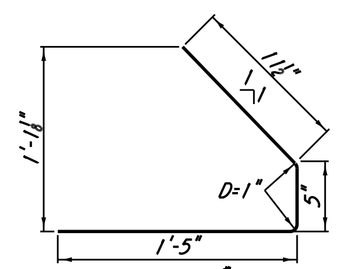
NEOPRENE PAD DETAILS

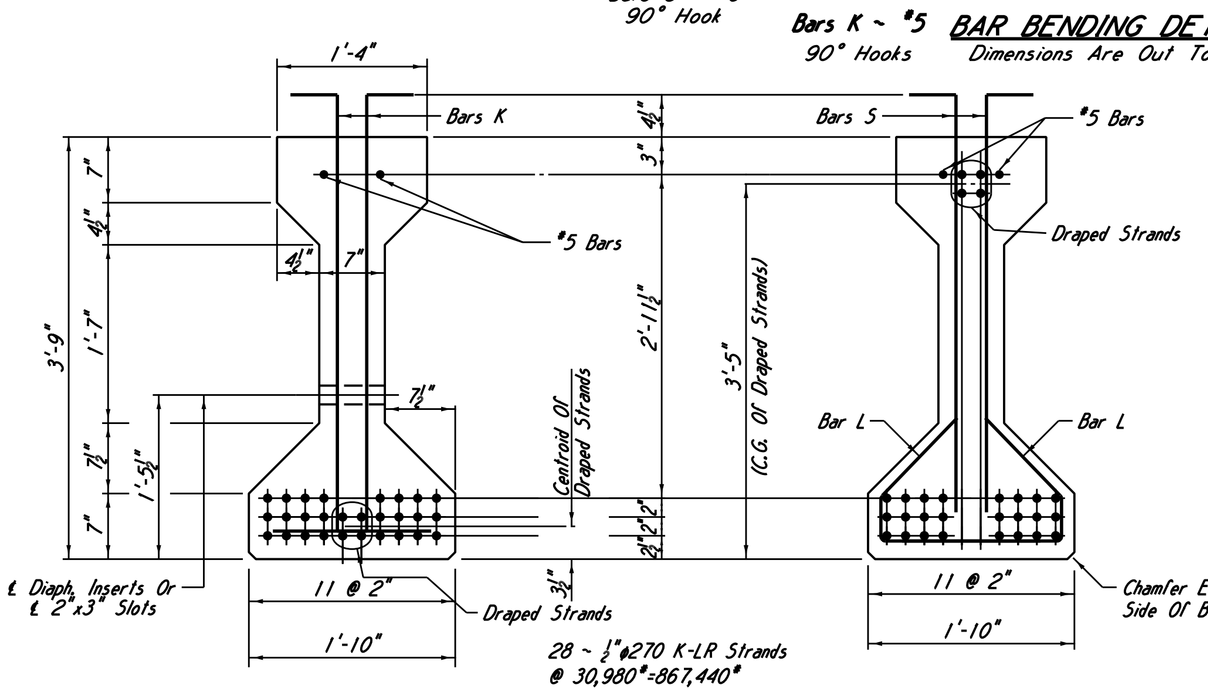
Testing acceptance procedure shall be in accordance with section 714.10.6 of the specifications. Bearing area on top of cap shall be cast smooth and true to grade.





NOTE: Cut strands flush and weatherproof with limestone colored "Sonolastic" (Sonneborn Building Products), "GC-9 Synthacalk" (Pecora Corp.), or approved equal, meeting the requirements of federal specification no. TT-S-00227E or TT-S-00230C, applied according to manufacturer's directions.

BAR BENDING DETAILS Dimensions Are Out To Out



SECTION NEAR ℄ SPAN

END ELEVATION

GENERAL NOTES:

Beams shall be manufactured in accordance with Mississippi Standard Specification For Road & Bridge Construction, 2004.

The tops of beams shall be rough floated. At approximately the time of initial set the entire tops of beams shall be scrubbed transversely with a coarse wire brush to remove all laitance and produce a roughened surface for bonding slab. Other surfaces shall be finished per specifications.

Strand pattern detailed is for ½"ø270 K-LR strands. Shop drawings of prestressed beams shall include the type and location of all strands.

The Director Of Structures, State Bridge Engineer shall be notified if the camber of the beam is not within the limits shown in table.

Concrete shall be class "FX" and:
(a) Shall have a 28-day cylinder strength of 6000 p.s.i.
(b) At transfer of the tensioning load, the cylinder strength of the concrete shall be as shown in table.

At the contractor's request a suggested concrete design mix will be furnished with the understanding that it is the contractor's responsibility to maintain 6000 p.s.i. concrete.

If any cylinder tests below 6000 p.s.i., the beam represented will be held on the yard until the 28-day strength is determined and acceptance or rejection has been established.

DESIGN DATA

Unit stresses are in accordance with A.A.S.H.T.O. LRFD, 2012

An extra dead load of 18 p.s.f. is incorporated into the design of this structure to accommodate the use of steel stay-in-place forms.

LR Indicates Low-Relaxation Strands

ADDENDUM

STATE	PROJECT NO.
MISS.	BR-019-02(041)

GENERAL NOTES:

Specifications: Mississippi Standard Specifications For Road and Bridge Construction, 2004.

No change of plans will be permitted except by written approval of the Director of Structures, State Bridge Engineer. Minor changes in detail of design or construction procedure may be authorized by the Director of Structures, State Bridge Engineer provided such changes will not be cause for contract price adjustment.

The final surface texture of the bridge deck shall be mechanically transverse grooved in accordance with Sections 501 And 804 of the specifications. See Misc. Span Details for limits of transverse grooving on bridge deck.

Bridge concrete shall be Class "AA".

Railing expansion joint material shall be bituminous fiber type unless otherwise noted.

No payment will be allowed for excavation incidental to the construction of end bents.

Bar bending details shall be in accordance with "Manual of Standard Practice for Detailing Reinforced Concrete Structures" (ACI 315R-94).

Reinforcement order lists and required placing plans shall be furnished in accordance with Section 805 of the Mississippi Standard Specifications. Partial submittals are not acceptable.

Shop drawings of prestressed beams, including an erection plan, shall be submitted in duplicate to the Director of Structures, State Bridge Engineer for approval prior to the manufacture of beams.

Concrete surfaces shall receive a Class 2 rubbed or spray finish in accordance with the specifications.

Reinforcing steel shall be ASTM A615, Grade 60, unless otherwise noted.

Work for which no pay item is provided in the proposal will not be paid for directly and compensation therefore will be included in the prices and payments for bid items.

⚠1 An extra dead load of 18 p.s.f. is incorporated into the design of this structure to accommodate the use of steel stay-in-place forms.

P/S CONCRETE GIRDER BRIDGE:

The girder deflection diagrams shown in these plans were prepared and intended for design and estimation purposes only. Actual bridge girder deflections may differ from the deflection diagrams shown in these plans.

It is the Contractor's responsibility to construct the bridge to meet the requirements of the plans and specifications including, but not limited to, the requirements for bridge deck smoothness.

Prior to formwork construction, the Contractor shall submit three (3) copies of a proposed BRIDGE SUPERSTRUCTURE CONSTRUCTION PLAN to the Director of Structures, State Bridge Engineer for review, through the Project Engineer. This submittal shall include all calculations, assumptions and parameters used by the Contractor to determine bridge girder deflections and form grade elevations. This submittal shall also include an erection and construction procedure that addresses the construction means and methodologies used by the Contractor and shall consider effects including, but not limited to, construction phasing, pouring schedules, applied permanent and construction loading, and shall include calculations and details of temporary girder bracing systems used to ensure girder stability and to counter the effects of girder tilt.

After girder erection and prior to deck construction, the Contractor shall submit deck thickness verification calculations for each girder. These calculations shall include a comparison of the erected girder top flange profiles versus the plan deck grade elevations over each girder plus the anticipated girder deflection due to applied permanent dead load and creep.

Three (3) copies of the deck thickness verification calculations and any proposed remediation measures to correct for thin deck areas shall be submitted to the Director of Structures, State Bridge Engineer for review, through the Project Engineer.

The BRIDGE SUPERSTRUCTURE CONSTRUCTION PLAN and the deck thickness verification calculations shall be prepared and stamped by a Mississippi Registered Professional Engineer.

PILE NOTES:

Test piles shall be driven as permanent piles at the location shown in the PDA TEST PILE SCHEDULE and will be paid for as test piles only.

The Director of Structures, State Bridge Engineer may authorize test piles driven outside the structural limits.

Test piles shall be driven as a continuous operation, to the bearing capacity and the minimum ground penetration shown in the PDA TEST PILE SCHEDULE, unless otherwise directed by the Director of Structures, State Bridge Engineer.

Permanent piles shall be driven to an elevation no higher than the elevation shown in the REQUIRED ULTIMATE PILE BEARING CAPACITY AND TIP ELEVATION SCHEDULE.

The tip elevation of piling, for hydraulic structures, may be determined by the scour line.

When feasible, bearing piles shall be driven full length and be spliced, only, as approved by the Director of Structures, State Bridge Engineer.

Welding shall be done by the ELECTRIC ARC process. Welders shall be certified and electrodes shall be approved.

When loading tests are required, the maximum test load shall be one and one half (1 1/2) times the minimum pile bearing capacity.

PDA test piles shall require a 1 day and 7 day restrike unless otherwise directed by the Engineer.

Pile lengths and driving criteria shall be provided based on the results of the PDA test piles.

The required ultimate pile bearing shown in the REQUIRED ULTIMATE PILE BEARING AND TIP ELEVATION SCHEDULE includes the LRFD resistance factor for PDA of 0.65.

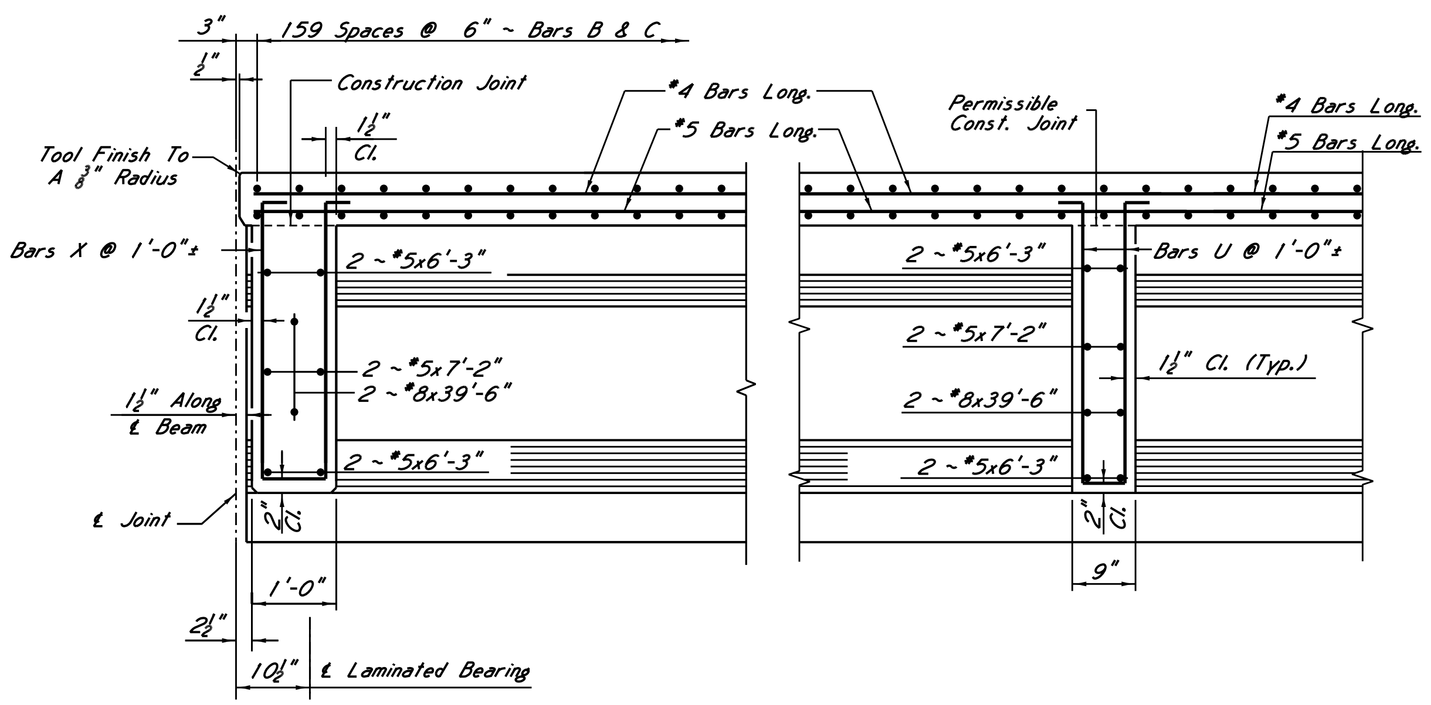
PART SECTION NEAR END OF SPAN
Showing 1'-0" End Concrete Diaphragm Details.

PART SECTION NEAR INT. DIAPHRAGM
Showing Slab Reinforcing & 9" Int. Concrete Diaphragm Details

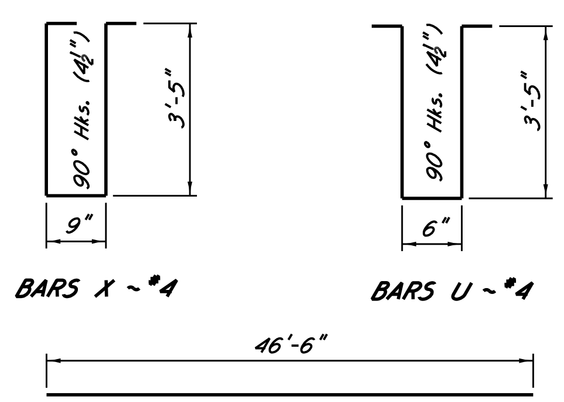
NOTE: Contractor should be aware of possible tilting of exterior beams during construction of the superstructure and should take precautionary steps to prevent such tilting of beams.

NOTE: Insure that holes in beam webs are completely filled with diaphragm concrete.



SECTION A-A

SECTION B-B



BAR BENDING DETAILS
Dimensions Are Out To Out

NOTE:
The volume of concrete in the fillets between the bottom of the nominal slab and the top of the beam has been estimated by using one half (1/2) of the fillet height, at the bearing, multiplied by the top flange width and the full length of the beam. This volume shall be used for final pay quantity.
For GENERAL NOTES, railing details and other typical span details see sheets no. C16 & C17.

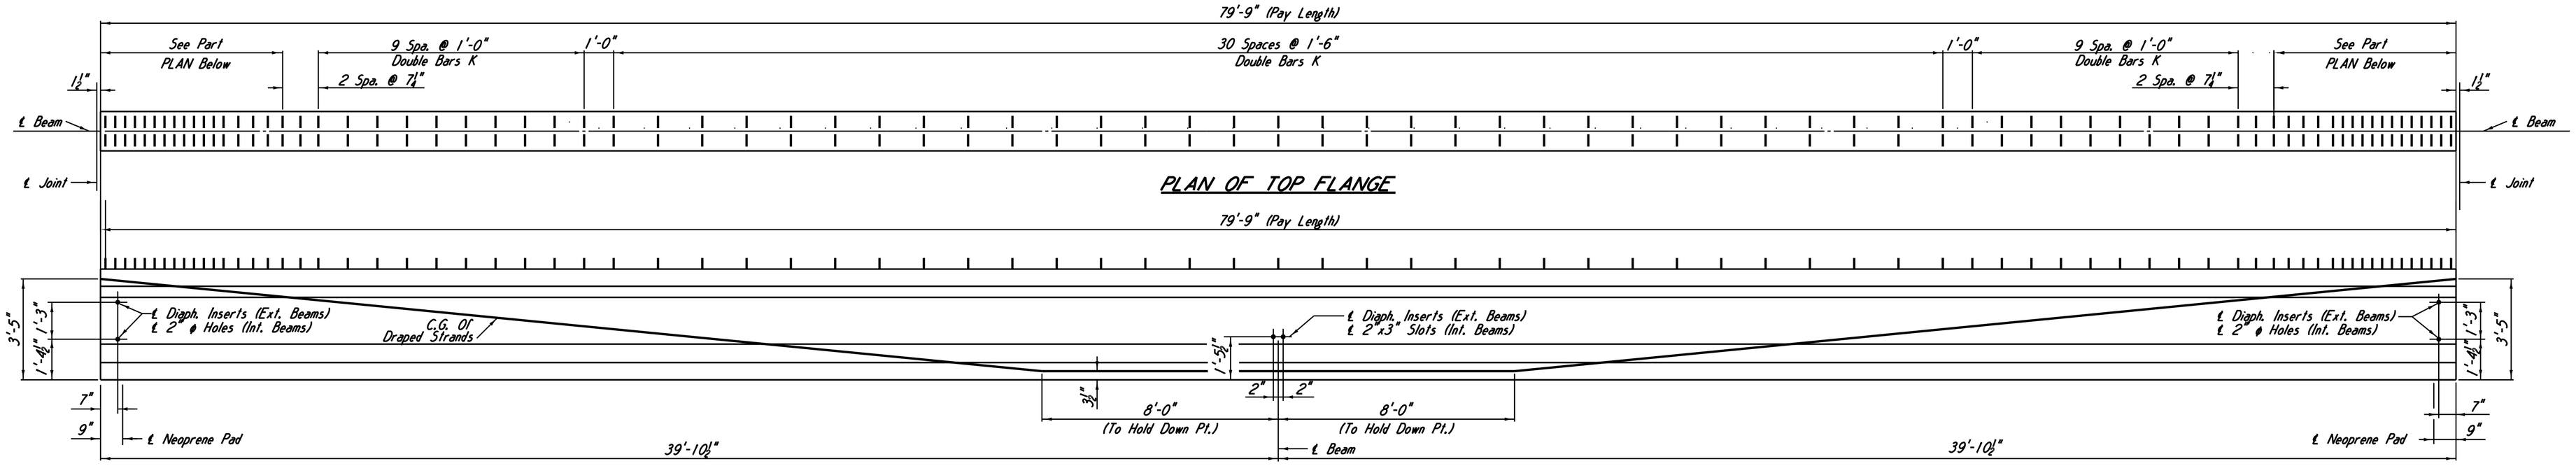
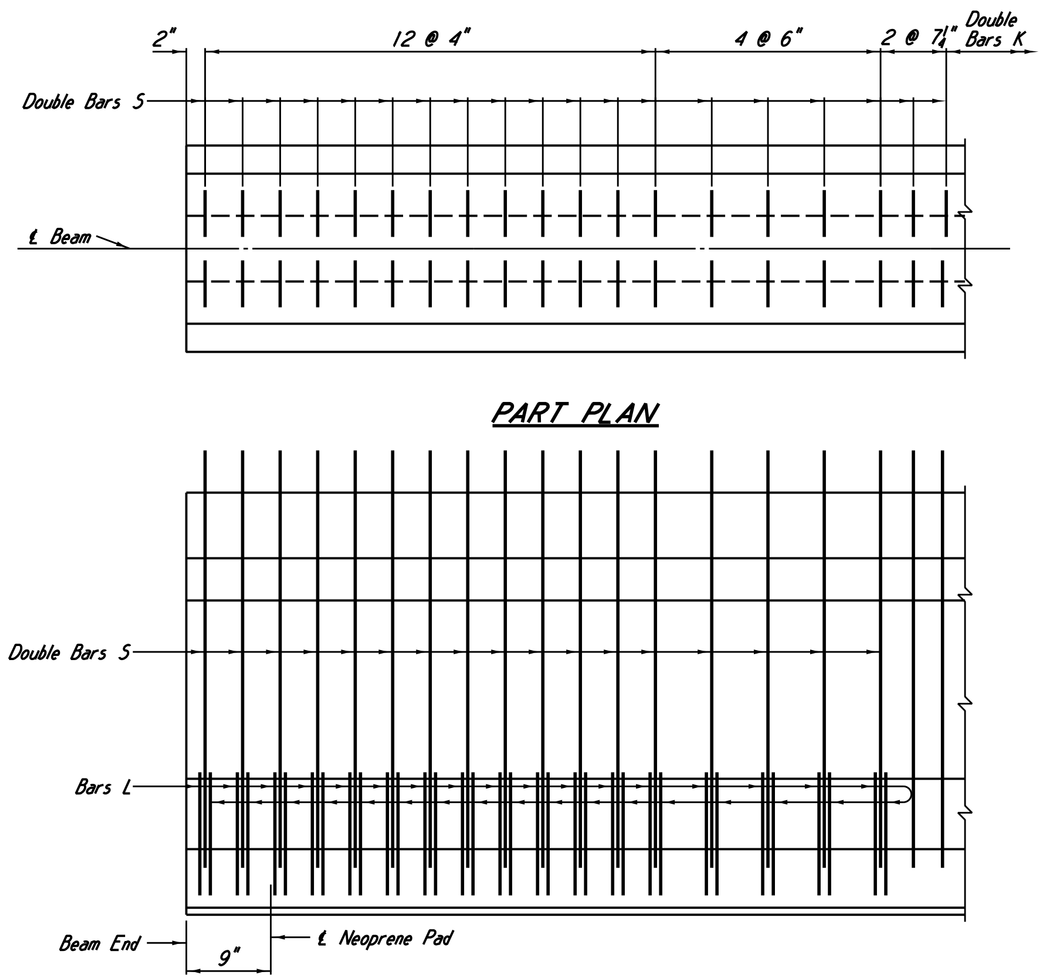
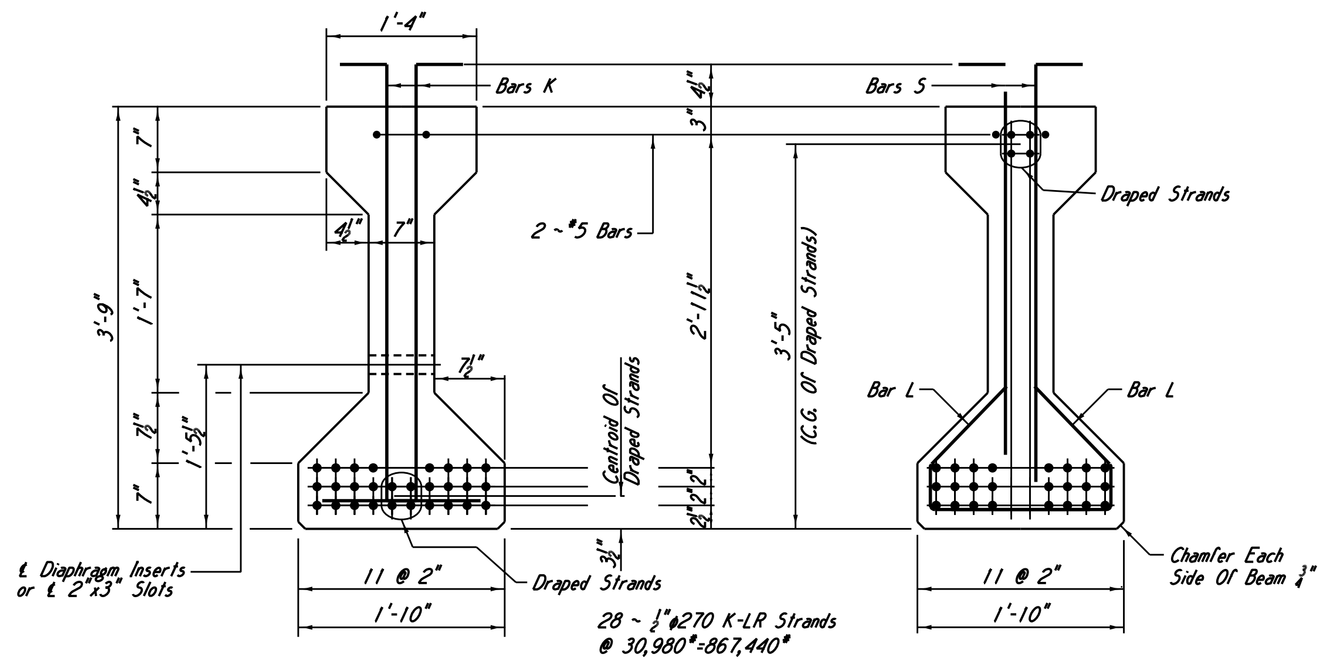
ADDENDUM

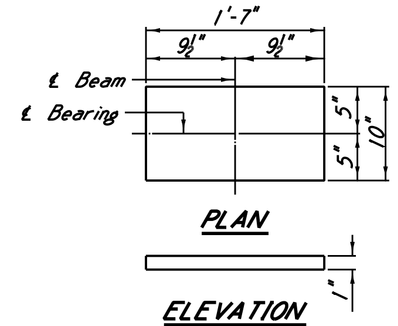
STATE	PROJECT NO.
MISS.	BR-019-02(041)



NOTE: Cut strands flush and weatherproof with limestone colored "Sonolastic" (Sonneborn Building Products), "GC-9 Synthacalk" (Pecora Corp.), or approved equal, meeting the requirements of Federal Specification No. TT-S-00227E or TT-S-00230C, applied according to manufacturer's directions.

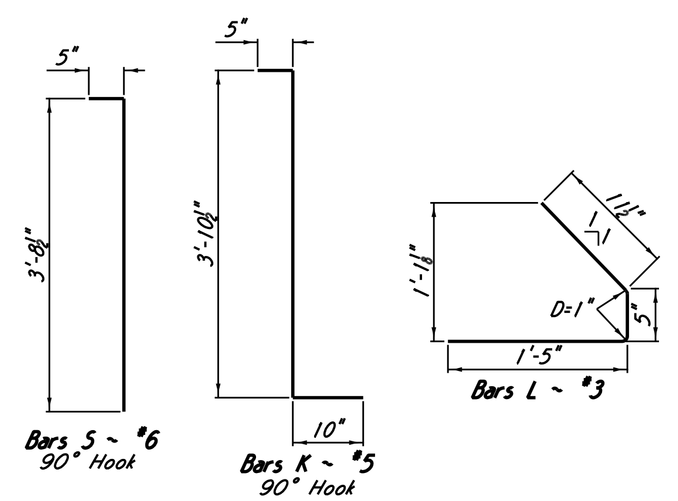






NEOPRENE PAD DETAILS

In no case shall neoprene pads be field cut. bearing area on top of cap shall be cast smooth and true to grade.



BAR BENDING DETAILS

Dimensions Are Out To Out

LR Indicates Low-Relaxation Strands

For deflection diagram, see misc. span details per sheet no. C17.

PRESTRESS REQUIREMENTS

Strand Type	Minimum Breaking Strength	Initial Tension	Required Number And Location Of Strands						Centroid For Total Number Of Strands (in.)		Distance From ℄ Span To Hold-Down Point	Camber Limits	Deflection Diagram			Minimum Concrete Strength At Time Of Release (psi)
			Total Number Strands	Straight Strands		Draped Strands										
				Number Strands	Centroid (in.)	Number Strands	Centroid (in.) ℄ Span	Centroid (in.) Beam End	At ℄ Span	At Beam End			A	B	C	
	lbs/strand	lbs/strand										⚠1	⚠1	⚠1	⚠1	
½"ø270 K-LR	41,300	30,980	28	24	4.50	4	3.50	41.00	4.36	9.71	8'-0"	0 To 3¼"	⅛"	1¼"	⅜"	5000

GENERAL NOTES:

Beams shall be manufactured in accordance with Mississippi Standard Specification For Road & Bridge Construction, 2004.

The tops of beams shall be rough floated. At approximately the time of initial set the entire tops of beams shall be scrubbed transversely with a coarse wire brush to remove all laitance and produce a roughened surface for bonding slab. Other surfaces shall be finished per specifications.

Strand pattern detailed is for ½"ø270 K-LR strands. Shop drawings of prestressed beams shall include the type and location of all strands.

The Director Of Structures, State Bridge Engineer shall be notified if the camber of the beam is not within the limits shown in table.

Concrete shall be class "FX" and:
(a) Shall have a 28-day cylinder strength of 6000 p.s.i.
(b) At transfer of the tensioning load, the cylinder strength of the concrete shall be as shown in table.

At the contractor's request a suggested concrete design mix will be furnished with the understanding that it is the contractor's responsibility to maintain 6000 p.s.i. concrete.

If any cylinder tests below 6000 p.s.i., the beam represented will be held on the yard until the 28-day strength is determined and acceptance or rejection has been established.

DESIGN DATA

Unit stresses are in accordance with A.A.S.H.T.O. LRFD, 2012

An extra dead load of 18 p.s.f. is incorporated into the design of this structure to accommodate the use of steel stay-in-place forms.
