MISSISSIPPI DEPARTMENT OF TRANSPORTATION

SECTION 904 - NOTICE TO BIDDERS NO. 4907

CODE: (SP)

DATE: 2/13/2014

SUBJECT: Scope of Work

PROJECT: MP-5487-40(014) / 305174301 - Leake County

The contract documents do not include an official set of construction plans but may, by reference, include some Standard Drawings when so specified in a Notice to Bidders entitled, "Standard Drawings". All other references to plans in the contract documents and Standard Specifications for Road and Bridge Construction are to be disregarded.

Work on the project shall consist of the following:

Overlaying approximately 6.8 miles of existing asphalt pavement on SR 487 in Leake County from Rosebud to Sebastopol beginning at Station 528+55 (BOP) to Station 890+48 (EOP).

Station 528+55 (BOP) to Station 890+48 (EOP)

Work in this area shall consist of overlaying the travel lanes, shoulders and local roads with 1.5" and variable of 9.5-mm HMA (or WMA), MT as per the attached typical section. Spot milling and inlaying (1.5" depth) shall be performed at the areas as listed in the attached tables or as directed by the Engineer. The HMA (or WMA) to be placed in spot milling locations shall be paid as HMA (or WMA) 9.5mm, MT, Leveling.

General Notes:

Prior to beginning the overlaying operations, any failed areas in the existing pavement shall be removed to subgrade depth and repaired with 9.5-mm HMA (or WMA), MT. Locations where ruts/dips/humps exist, where surface has previously been patched, or is severely alligator cracked but not deemed to be full depth failure shall be repaired by milling and inlaying with 1.5" and variable of 9.5-mm HMA (or WMA), MT. The failed and spot mill/fill locations are shown in, but not limited to, the attached table and as directed by the Engineer. Payment for removal and disposal of failed areas and spot mill/fill areas will be made using the appropriate pay items. Potholes that may exist are to be patched in a timely manner and prior to beginning the asphalt overlay. Patching of potholes shall be considered an absorbed item. Cracks of significant depth or depressions in the existing surface which, in the opinion of the Engineer, may cause reflective cracking shall be filled with HMA immediately prior to overlay operations.

Traffic will not be allowed to run on the milled surface; therefore, any area milled shall be paved prior to opening. Overnight lane closures will not be allowed for this operation. Milling shall be performed in accordance with the attached drawings. Traffic will be allowed to run on all milled tie-ins. Temporary pavement joints (paper joints) shall be at least three (3) paper-widths long shall be used at all milled tie-ins and shall be adequately maintained. Approved mix designs must be on hand prior to milling. Milling operations will not commence until such time that, in

the opinion of the Engineer, weather conditions have been consistently suitable enough to allow the placement of the HMA (or WMA) after the milling operations.

Publicly maintained roads and streets should be paved to the existing right-of-way. Privately owned entrances shall be paved to the shoulder line per the included typical drawing. Pads shall be shaped horizontally and vertically to prevent excessive drop-offs. Granular material (Class 5, group 'E') shall be provided around the pads to prevent shoulder drop-offs as directed and shall be placed in a timely manner. Drop-offs exceeding 2.5" shall be corrected within two (2) calendar days of the placement of the pad. Stabilizer aggregate shall be used as directed by the Engineer.

It shall be the responsibility of the Contractor to protect existing structures such as pipes, inlets, aprons, bridges, etc. from damage which might occur during construction. The Contractor shall replace or repair, as directed by the Engineer, any structures damaged during the life of the contract. No payment will be made for replacement or repair of damaged items.

The Contractor shall erect and maintain construction signing and provide all signs and traffic control devices necessary to safely maintain traffic around and through the work areas in accordance with the Traffic Control Plan and the MUTCD. The cost is to be included in the price bid for Pay Item No. 618-A, Maintenance of Traffic. Fluorescent orange sheeting shall be used on all construction and traffic control signs except those designated in the plans to be black legend and border on white background. Standard roadside construction signs and barricades will be paid for using the appropriate pay items.

Roadside construction signs, barrels, etc. shall be placed in accordance with the attached drawings or as directed by the Engineer. W20-1 signs shall be placed on all public road approaches as shown or as directed.

Incidental work such as removing vegetation, shaping and compacting shoulders, removing and resetting signs and/or mailboxes, removing excess asphalt material, project clean-up, and other items of incidental work necessary to complete the project will not be measured for separate payment and will be considered included in the prices of items bid.

The Contractor shall on a daily basis, remove all debris from within the roadway and a 30-foot clear zone which, in the opinion of the Engineer, is a hazard to the traveling public. This activity shall begin with the beginning of work or the beginning of the contract time, whichever comes first. No direct payment will be made for the debris removal; the cost is to be included in the prices of items bid. Failure of the Contractor to remove the debris as prescribed herein shall be just cause for withholding the monthly progress estimate payment or suspending active operations until the debris is satisfactorily removed by the Contractor.

Where applicable the existing shoulders are to be raised to match the new pavement elevation by placing variable depth Granular Material (Class 5, Group E) on the existing shoulders. Placement of the granular material on the finished asphalt course shall not be permitted. The material shall be bladed, rolled, and compacted to a finished slope of four percent (4%). Placement of this material shall be performed to provide a uniform and compacted shoulder with

a minimum depth and width of material placed. Shoulders with adequate shoulder material in place shall be bladed to a slope of four percent (4%). The cost of blading will be an absorbed item and is not to be included in the price of pay items bid.

There is approximately 100 feet of existing asphalt curb designated for removal by the Engineer. The cost of removing and disposing of the curb will be absorbed in other pay items bid.

Removal of the existing shoulder material shall be coincident with the milling/overlaying operation to prevent the possible ponding of water. No payment will be made for blading or removal of the existing shoulder material. Any material excavated from the existing shoulder shall be used to raise the existing shoulder to match the new pavement elevation and any surplus material shall be spread along the edge of the shoulders, fore slopes, or other adjacent areas as directed by the Engineer and will be an absorbed item. Material which cannot be placed in adjacent areas and deemed to be excess excavation by the Engineer shall be removed under Pay Item No. 203-G Excess Excavation.

Existing raised pavement markers are to be removed prior to beginning the overlay operation. No measurement will be made for separate payment; the cost is to be included in the prices for other items bid. Permanent pavement markers are to be placed in accordance with the attached drawings and Standard Drawings. Two-way yellow markers are to be placed on two-way roads. Two-way clear markers are to be placed on county roads as shown on attached drawings.

Temporary traffic stripe will be required immediately after the required overlay and prior to opening area to traffic. Temporary stripe is to be placed in the same location and configuration as the permanent stripe.

All permanent striping will be thermoplastic double-drop. Edge lines shall be placed to accommodate the lane widths shown on the applicable typical sections unless prevented by field conditions
