

**Call 06 Widen & Overlay approximately 17 miles of SR 32 from SR 330 to Calhoun/Chickasaw County Line, known as State Project No. MP-2032-07(004) / 305154301 in Calhoun County.**

Q1. After measuring several areas along the 17 mile stretch of Section 2 of this project, it appears that majority of the existing roadway has an overall width of twenty-two (22') feet. it also appears that several areas along this project have very little to no shoulder/embankment material to adequately allow for the required widening to take place. It is outlined that the overall pavement width after Trench Widening is done shall be twenty-eight (28) feet wide which will required the widening to be at least three feet (3') wide instead of two (2'). Because several areas do not have enough embankment to allow for this, will the contractor be allowed to narrow down the trench widening to whatever width is possible based on the material that is there? If not, it appears that the addition of gravel material would not solve this problem without actually widening the entire embankment, grassing and in some places extending pipes. No pay items are set for this.

A1. See the addendum for this project.
