

Call 04 Replacing Bridge Nos. 166.2, 166.4, 167.8, & 168.3 on SR 7, known as Federal Aid Project No. BR-0019-02(054) / 105189302 in Benton County.

Q1. The plans indicate encasement of steel piling to a depth of 3' below the existing ground. Since all of these bents appear to be in standing water, cofferdams will be required at every bent. Is this the intent or could concrete piling be substituted?

A1. The Contractor should bid as per the plans.

Q2. Bid item 630-K003 "Welded & Seamless Steel Pipe Post, 4" is shown on the "Summary of Quantity" sheet 14. Bid item 630-K003 is also shown on plan sheet 21 (SRS-1). However this item is not shown on the EBS file or shown in the list of quantities in the proposal book. This item will be required for the 48" Stop and 48" Stop Ahead Symbol at approximate station 244+50.

A2. See the addendum to the project.
