

Call 09 Bridge Repair on US 82 Luxapalila Creek Bridge No. 175.8, known as State Project No. EXB-0011-03(068) / 107139302 in Lowndes County

Q1. Is there a construction access plan for the delivery of the 5,552 tons of riprap required for this project?

A1. A temporary ramp off of US 82 and use of a lane closure would be acceptable. Those costs would be absorbed.

Q2. There is considerable erosion on the West side of Luxapalila Creek underneath the bridge. There is a note requiring that disturbed existing bank or ground line will be repaired by placing a layer of 300lb riprap at the contractor's expense. How will these eroded areas be addressed?

A2. See the addendum to the project.
