

**Call 05 Overlay approximately 4 miles of US 90 from the Singing River Bridge to 14th Street, known as Federal Aid Project No. NH-0003-01(195) / 107650301 in Jackson County.**

Q1. I am trying to determine the locations of the "Vehicle Detection Loop Assemblies" at Pascagoula St & Market St on Hwy 90. The spec's simply state that the loops are located at these intersections. It does not specify the type, size, and specific location of each loop. Are they all presence loops, are there any advanced loops? On the presence loops, will this job require standard 6'x50' loops or 2-4-2 loops?

A1. The as-built plan information is available at the link below:
