

LOCK YOUR AIRPLANE!

(Post at the Airport)

Airport owners should strongly encourage that all based aircraft owners take reasonable measures to prevent the theft and illegal operation of their aircraft.

Possible options include:

- Installation of an anti-theft device and/or a device to lock aircraft flight controls when not in use. For smaller aircraft, a number of these items are currently on the market, which include:
 - throttle locks
 - propeller locks
 - ignition-disabling devices.
- Lockable devices to secure their aircraft to the ground.
- Lock the doors on aircraft storage hangars at all times when not in use.

At a minimum, aircraft owners should be required to remove the keys to their aircraft and lock all doors when not in use.
