Web Site Page Views per Day

On April 1st and 7th we experienced an above average number of incidents. On April 24th we had severe weather in central Mississippi including a tornado that caused extensive damage in several counties.

DATA KEY

Incident Management data is derived from a newly developed database specifically designed to allow operators to track the detailed location and the exact time that first responders arrive on scene of traffic incidents on Mississippi freeways.

Traveler Information statistics demonstrate the data sent by Mississippi Traffic Management Center control room operators to the www.mstraffic.com website. Page views are the actual number of times that the public retrieves traffic information.

April 2010 Mississippi TMC Performance Measures

2 of 2

The Mississippi Department of Transportation is responsible for providing a safe intermodal transportation network that is planned, designed, constructed and maintained in an effective, cost efficient, and environmentally sensitive manner.
