Web Site Page Views per Day

Note: Spike on Feb. 12, 2010 is due to winter storm.

DATA KEY

Incident Management data is derived from a newly developed database specifically designed to allow operators to track the detailed location and the exact time that first responders arrive on scene of traffic incidents on Mississippi freeways.

Traveler Information statistics demonstrate the data sent by Mississippi Traffic Management Center control room operators to the www.mstraffic.com website. Page views are the actual number of times that the public retrieves traffic information.
