

**Call 03 Bridge Replacements on SR 3 (Bridge Nos. 183.8 & 184.2), known as Federal Aid Project No. BR-0072-05(011) / 103330302 & 303 in Tate and Tunica Counties.**

- Q1. Plan Sheet 8046 details the settlement plates which are to be installed at the abutments of Bridge A. Note 2 states that end bent abutment piling shall not be driven until it is determined primary consolidation has occurred. No timeframe for the anticipated consolidation period is specified. What is the expected time frame between the completion of the embankment and the end of the consolidation period?
- A1. See addendum.
- Q2. Please provide the plans for the existing bridges on this project.
- A2. The plans for the existing bridges can be downloaded from the link below:  
<https://file-exchange.mdot.state.ms.us/dl/?f=113454f9737d6d6cb7d4e7a9fe2a293a78bc3c3e>
- Q3. Sheet numbers 8024 and 8025 show bearing replacement details for the end bents on both bridges and the intermediate bents on Bridge A. There don't appear to be any other notes throughout the plans regarding these bearing replacements. What is the purpose of these sheets? Are the girders to be originally set on temporary blocking? Is there supposed to be a bearing replacement pay item?
- A3. Sheet numbers 8024 and 8025 were included to show how to perform bearing replacements on future projects. The work shown on these sheets is not a part of this project. For the purposes of this contract these sheets can be disregarded.
