

**Call 09 Mill & Overlay approximately 6.5 miles of US 278 from West of SR 338 to SR 15, known as Federal Aid Project No. NHPP-0077-01(007) / 108650301 in Pontotoc County.**

- Q1. 1.) Since the termini of the project goes to Hwy 15 will the ramps West of the intersection be milled and paved? If so can the Department provide information on how each ramps is supposed to be milled and paved since the East bound and West bound lanes sections are different? 2.) Will the J-turn intersection be milled and paved or omitted? If it is to be paved will the East bound lanes in that area be milled and paved to maintain the grades since there is curb and gutter?
- A1. 1.) Yes, the ramps west of SR 15 will be included in the project. Both ramps will be handled just like the corresponding lane. The eastbound ramp will have a section 150' long milled to tie it down similar to the bridge end and BOP, and the westbound ramp will be milled and overlayed to match the lane. 2.) The J-Turn section is included in the project. The eastbound lanes will be milled through the curb and gutter section to maintain the existing grades through the intersection.
