Introduction

This report provides information on public road length and vehicle distance of travel in Mississippi. Included are several graphs and tables illustrating information contained in the Planning Division's files as of December 31, 2010. These totals are based upon road distances as determined by distance measurement instruments (DMI). Therefore, they may not agree with other Department publications that utilized "plan measurements," based upon horizontal survey distance. However, due to metric conversions and rounding, calculations may vary slightly between tables.

Since most travel is upon State maintained highways, they receive the majority of user taxes. Figure 1 illustrates road length and distance of travel by maintenance responsibility.

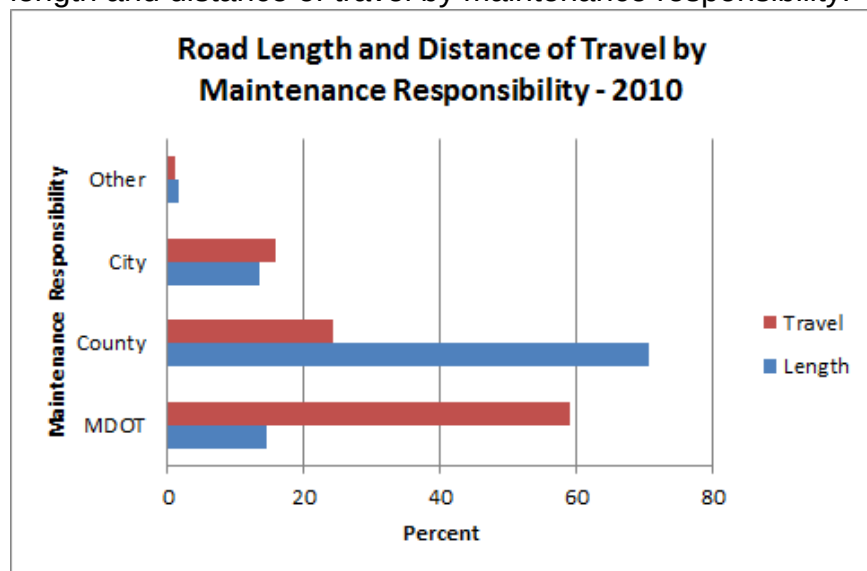

Figure 1

Figure 2 shows how MDOT road length and distance of travel is arranged by functional classification.

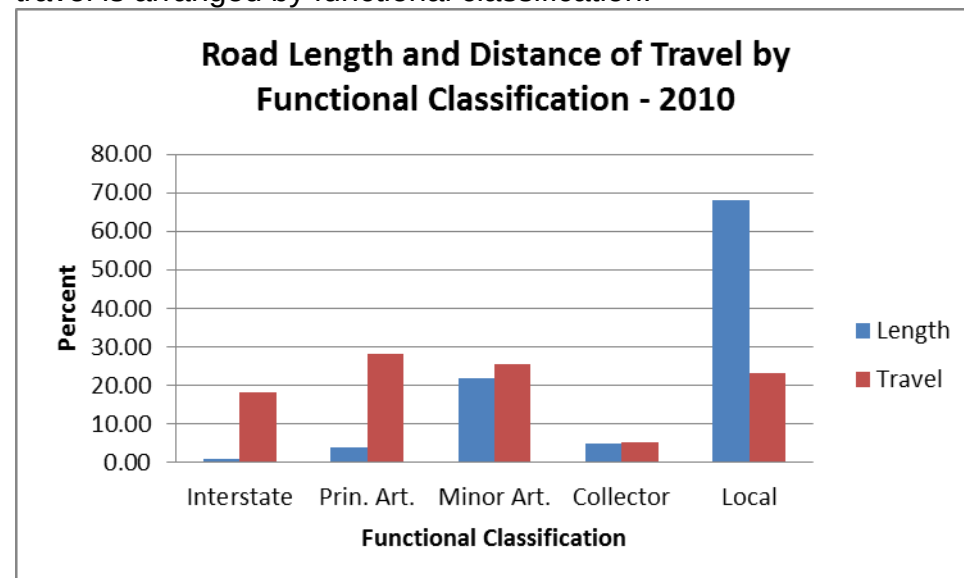

Figure 2

The Designated Section of this publication is to provide, in a single source, a compilation of route designations in the State of Mississippi by either the United States Congress or the Mississippi State Legislature. This compilation is for planning purposes only and is not intended to represent legal descriptions. The applicable laws passed by the legislative bodies designating routes should be consulted in the event there are any doubts about a designation when using this publication.

The legislative bodies can make additions to, or deletions from, the State Designated Highway System. It should, however, be pointed out that the terms "State Designated Highway" and "State Maintained Highway" are not synonymous. In order to become apart of the State

Maintained System, a route must be officially designated, meet certain geometric criteria, and be accepted by the Transportation Commission for maintenance. Routes on the designated system that are not accepted for maintenance by the Commission should be maintained by the local jurisdiction in which the route is located.

Figure 3 summarizes maintenance category by route.

Length by Route and Maintenance Category - 2010				
Route Category	Units	Maintenance Category		
		MDOT Maintained	County, City, and Other Maintained	Total
Designated Routes				
Interstate	Mi	698.782	0.000	698.782
US Numbered	Mi	2,524.234	4.702	2,528.936
MS Numbered (Including loops, spurs, & connections)	Mi	7,562.445	407.897	7,970.342
Frontage Roads,	MI	127.164	3.876	131.040
Subtotal	Mi	10,912.625	416.475	11,329.100
Non-Designated				
All other routes (Includes Frontage Roads and Natchez Trace)	Mi	0.000	63,751.378	63,751.378
Totals:	Mi	10,912.625	64,167.853	75,080.478

Figure 3

Figure 4 summarizes the extent of the National Highway System. The National Highway System Designation Act of 1995 was signed by President Clinton on November 28, 1995. It provided for the establishment of an interconnected system of Interstate and principal arterial routes to serve

major population centers, international border crossings, ports, airports, public transportation facilities, and other intermodal transportation facilities.

National Highway System Length
with Intermodal Connections

National Highway System Route Category	Units	Rural	Urban	Total
Interstate	Mi	489.604	209.178	698.782
Other NHS	Mi	1,635.873	402.677	2,038.550
NHS Intermodal Connections	Mi	61.695	50.989	112.684
Statewide Totals	Mi	2,187.172	662.844	2,850.016

Figure 4

The National Highway System (NHS) was established by the Department of Transportation (DOT) in cooperation with the States, local officials, and metropolitan planning organizations (MPO).

Figure 5 summarizes the lane length used by the Maintenance Division for Fiscal Year 2010 budgeting purposes only. Lane length is based on plan measurements and does not include bridges. Therefore, it is not comparable with other road length in this publication. Lane length includes the length of all individual lanes of travel (through lanes, turn lanes, on and off ramps, and other auxiliary lanes).

**MDOT Maintenance Lane Length
Not Including Bridge - 2010**

Maintenance District	Lane Length (Miles)
1	5,385.170
2	5,435.400
Northern Commission District	10,820.570
3	3,774.360
5	5,168.300
Central Commission District	8,942.660
6	5,591.610
7	3,858.380
Southern Commission District	9,449.990
Statewide Total	29,213.220

Figure 5

The total road length remains fairly constant from year to year as seen in Figure 6. The table provides a historical summary of the relationship between non-municipal, municipal, and total statewide length statistics for a five-year period.

**Historical Public Road Length
2006-2010**

System	Surface					
		2006	2007	2008	2009	2010
Total Non Municipal	Paved	40,871.700	41,358.646	41,878.962	42,400.748	42,858.736
	Unpaved	22,074.303	21,703.906	21,045.918	20,506.538	20,101.999
	Total	62,946.003	63,062.552	62,924.880	62,907.286	62,960.735
Total Municipal	Paved	10,989.367	11,101.604	11,511.799	11,630.253	11,686.718
	Unpaved	473.044	458.377	446.674	445.348	433.025
	Total	11,462.411	11,559.981	11,958.473	12,075.601	12,119.743
Total Statewide	Paved	51,861.067	52,460.250	53,390.761	54,031.001	54,545.454
	Unpaved	22,547.347	22,162.283	21,492.592	20,952.462	20,535.024
	Total	74,408.414	74,622.533	74,883.353	74,983.463	75,080.478

Figure 6

Routes in this publication are generally grouped into six categories and the following abbreviations are used as route prefixes:

I	Interstate Highway System
US	United States Highway System
MS	Mississippi State Highway System
None	Memorial Highways, Bridges, Scenic Routes Wildflower Routes

Section A

Highway Planning

Overview of the Highway Planning and Development Process

There are five basic stages in the highway development process that involves planning, project development (preliminary design), final design, right-of-way, and construction. It is during the first three stages that designers and communities working together can have the greatest impact on the final design features of the project. The flexibility during the detailed design phase is limited a great deal by the decisions made at the earlier stages of planning and project development.

The planning stage involves the definition of the need for highway improvement projects and may take place on the State, regional, or local level. The involvement of the public

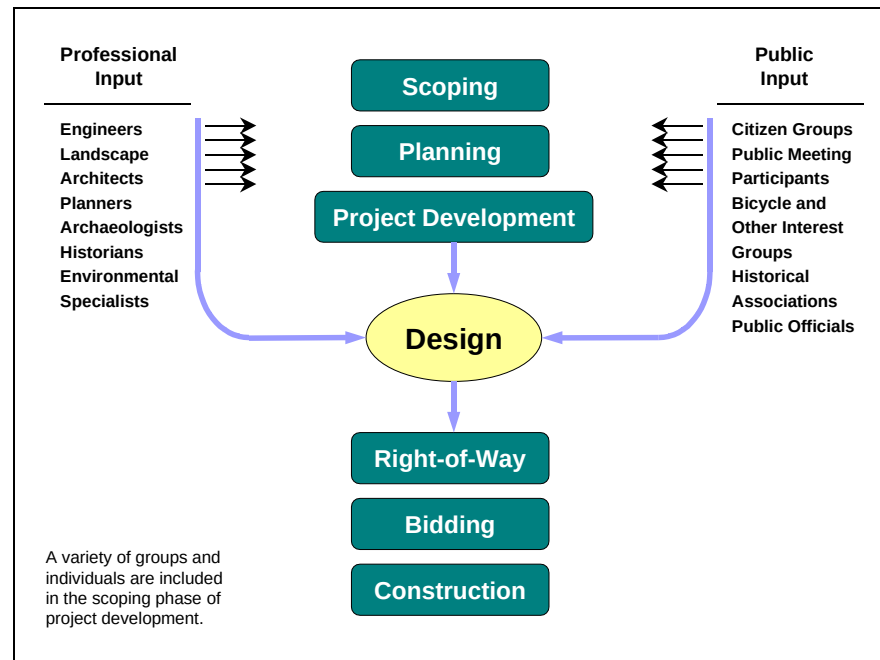

is a key part of the decision-making process that occurs during planning.

There are many factors to consider before a project is designed. The potential impact that a proposed facility or improvement may have while the project is still in the conceptual phase is a main consideration. Some of the main factors are shown in the following diagram.

Decisions made at the project development level help to define the major features of the resulting project through the remainder of the design and construction process. Just as in the planning stage, there are many decisions made during the scoping phase of project development, regardless of the level of detail being studied. It is important that the various interested individuals or groups be identified and provided with the opportunity to get involved. A good community impact assessment will also help identify interested parties.

Design is a part of the overall highway development process. Detailed design occurs in the middle of the process, linking the preceding phases of planning and project development with the subsequent phases of right-of-way acquisition, construction, and maintenance.

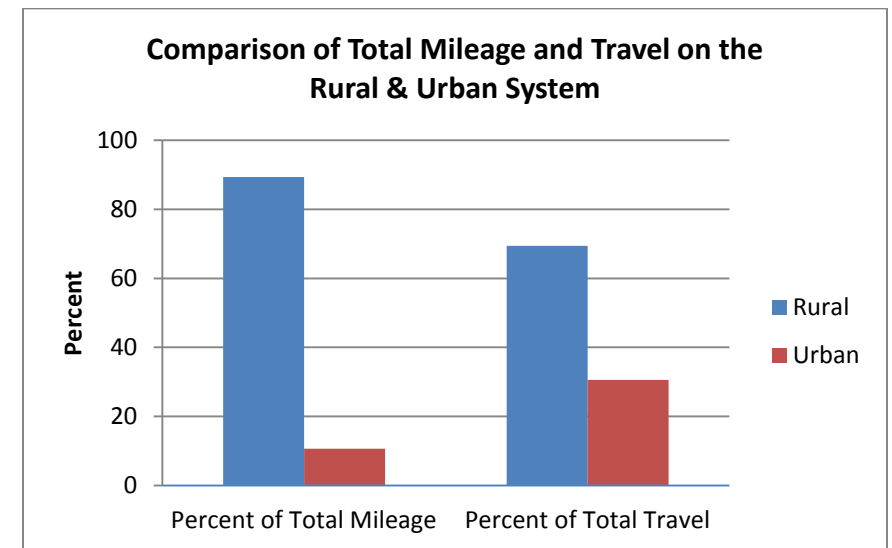

The project can move into the final design stage after an alternative has been selected. Upon completion of the final design stage, a complete set of plans, specifications, and estimates of quantities of materials is ready for solicitation of construction bids.

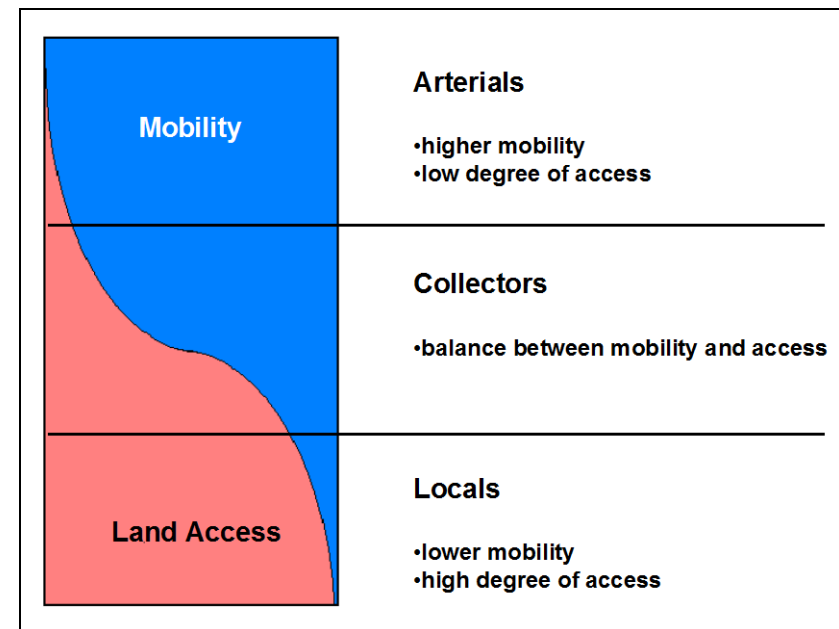

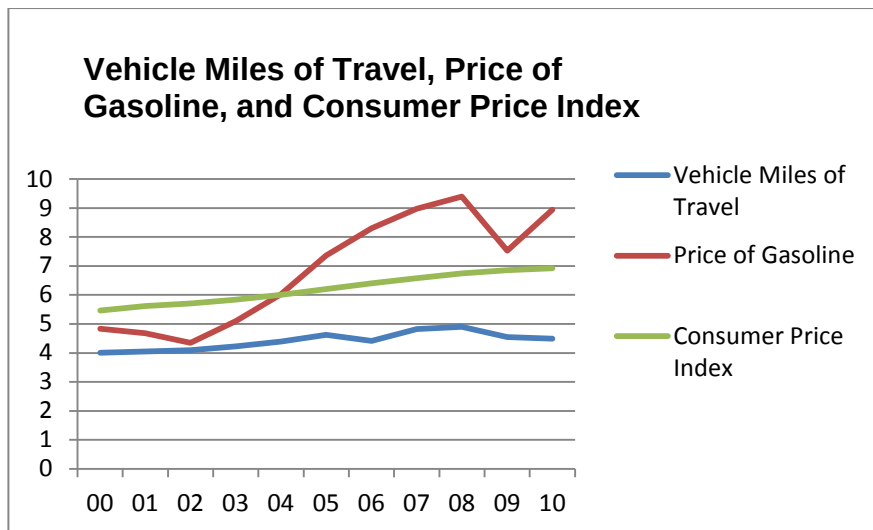

Minor adjustments may be made to the design of a project during the right-of-way and construction stages. After right-of-way is purchased for a project, a construction contractor is selected and construction commences.

The Mississippi Highway System

The Mississippi Highway System consists of slightly over 74 thousand miles of roads and streets. Of this, 64 thousand miles are located in rural areas, and 10 thousand miles are in urban areas. The graph below shows the relationship of total road miles and miles traveled by system in the rural and urban areas.

The correlation between vehicle miles traveled, gasoline prices, and the consumer price index is shown in the graph on the following page. The consumer price index is used as a "fixed weight" to measure the change in the vehicle miles traveled and the gasoline prices.

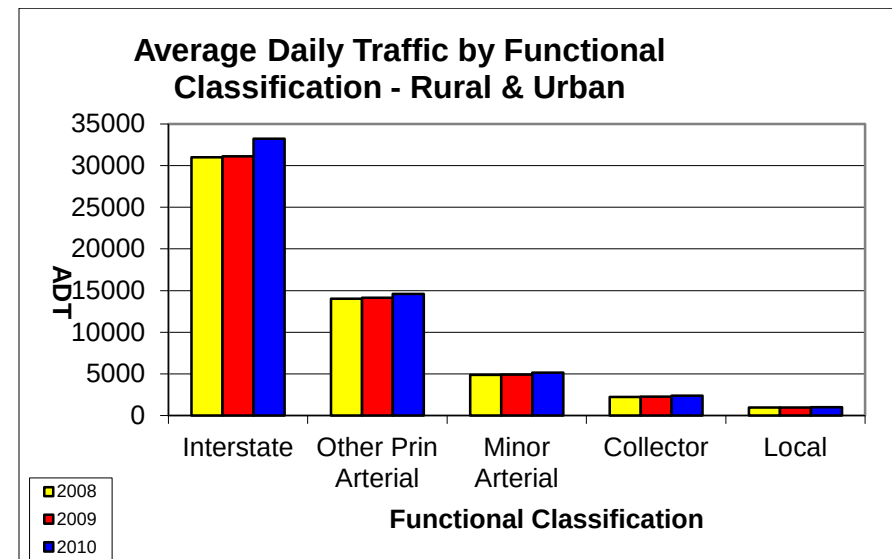

Functional Classification

Functional Classification defines the role that a particular public road plays in serving the flow of trips through a highway network.

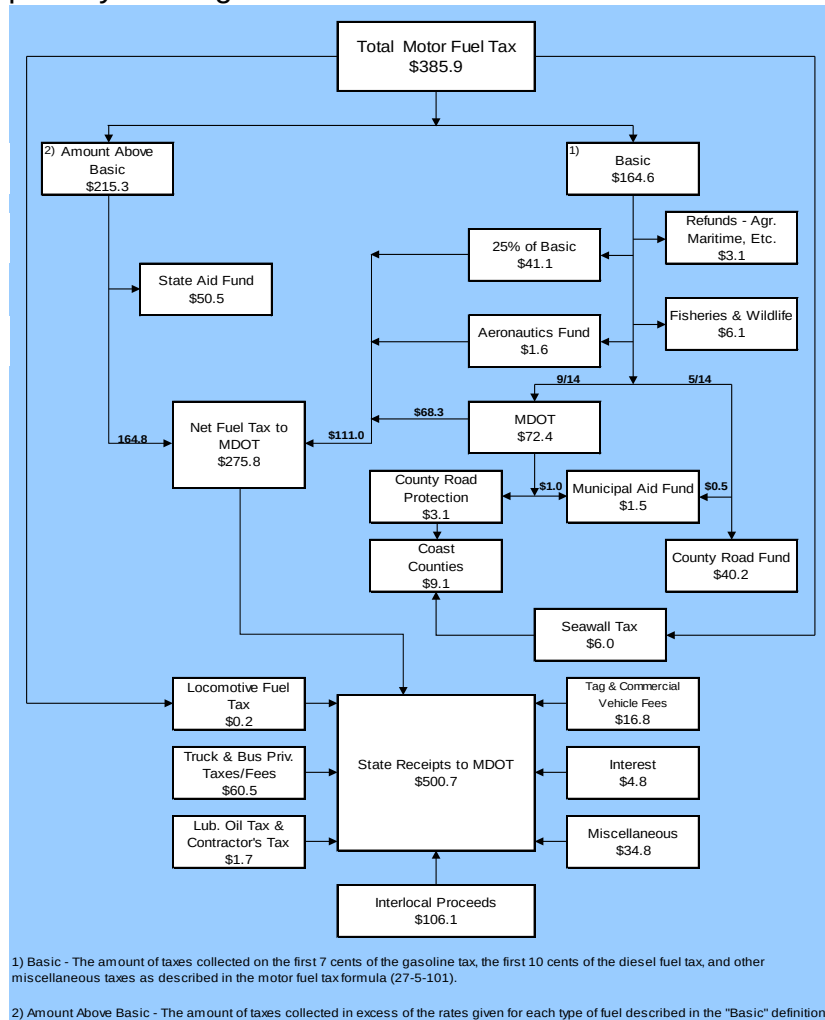

Travelers use a combination of arterial, collector, and local roads for their trips. Each road type has a specific purpose or function. Some provide land access and others provide travel mobility at varying levels. Arterials provide a high level of mobility and a greater degree of access control while local facilities provide a high level of access to adjacent properties but a low level of mobility. Collector roadways provide a balance between mobility and land access. Local roadways serve a land access function to homes, businesses, individual farms and ranches, and other uses.

The next graph illustrates the Average Daily Traffic (ADT) by Functional Classification for three consecutive years.

Road Revenues

The chart below shows the state revenues to the MDOT. The Mississippi Legislature provides state funding through motor fuel taxes and other fees. The state motor fuel tax is a primary funding source for the MDOT. The MDOT received

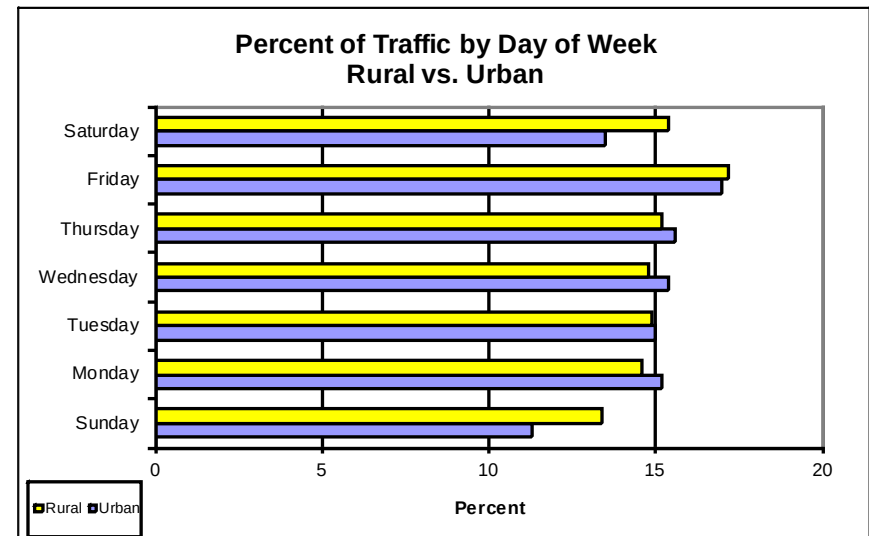

\$276.0 million in funds from state motor fuel taxes (includes locomotive fuel) during fiscal year 2010.

Continuous Traffic Recorders

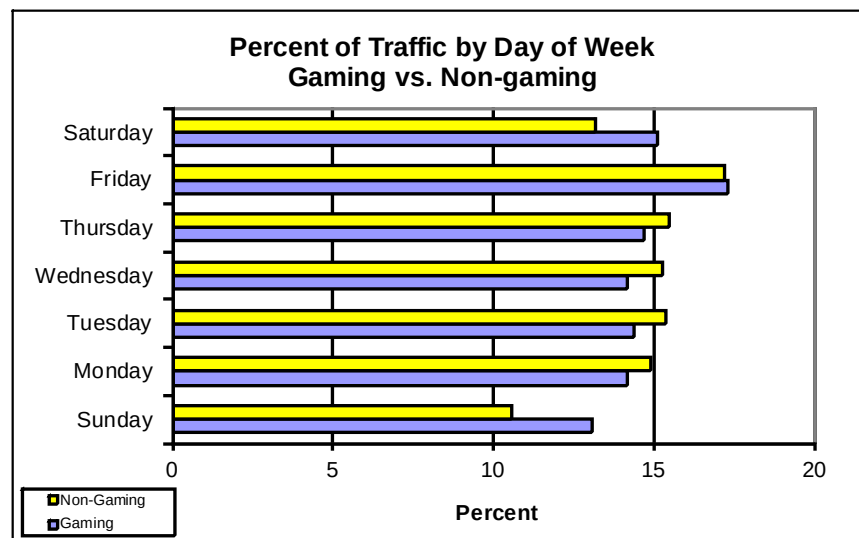

Continuous Traffic Recorders are used to provide continuous traffic count coverage 24 hours a day 365 days a year.

Continuous counts are the backbone of the State's traffic counting program. This data are used to develop seasonal or monthly, day-of-week, and growth factors which are then used to adjust short coverage counts to AADT.

Since Continuous Traffic Recorders are continuously collecting data, information can be gathered regarding traffic patterns in areas throughout the State. Weekday traffic volumes are higher in the urban areas than those volumes in the rural areas. The following graph compares the rural and urban traffic patterns by day of the week.

Typically, the traffic on weekends is higher in gaming areas than in non-gaming areas. The graph below illustrates the comparison of gaming and non-gaming traffic by day of week.

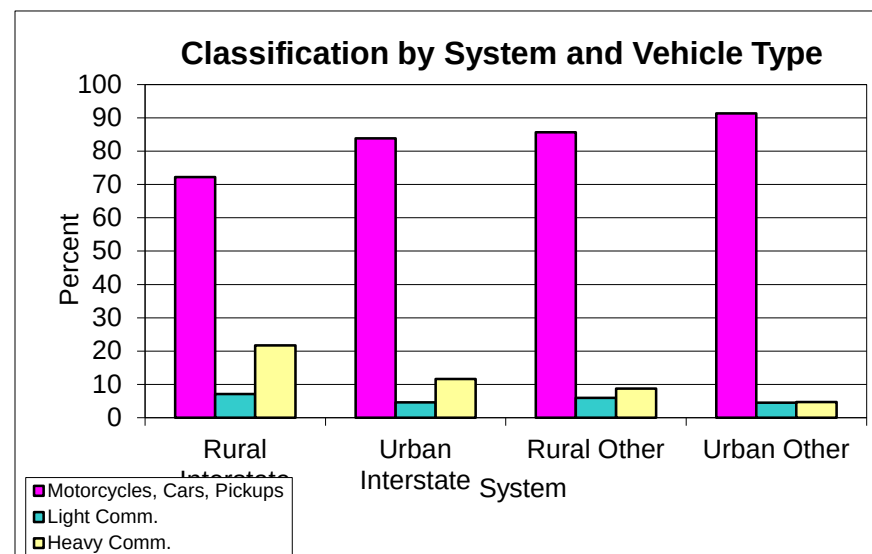

Vehicle Classification

Vehicle classification is defined as the types of vehicles that travel a particular roadway at a specific location and the number of axles on the vehicle. Vehicle classification counts are made at locations selected by statistical analysis to insure accurate distribution. The vehicle classification data are of considerable value to agencies involved in almost all aspects of transportation planning and engineering.

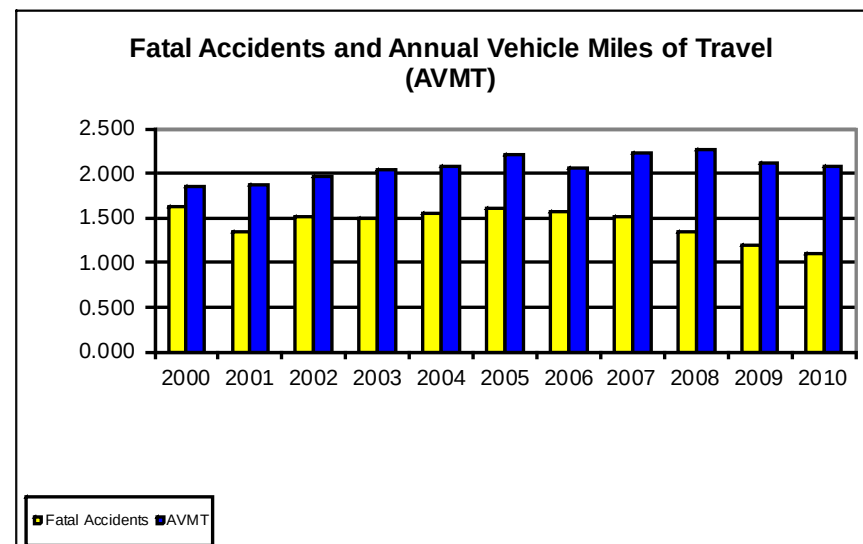

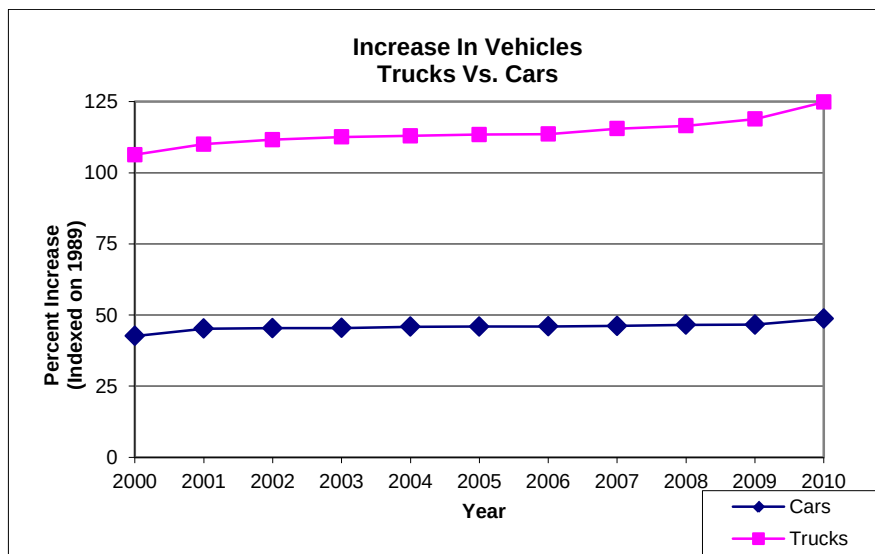

Generally, classification counts are made at locations for a period of 48 hours and record the number of vehicles in each group by hourly increments. Classification data are summarized in order to obtain generalized percentages of commercial and non-commercial vehicles during an average 24-hour period.

These summary data are utilized in planning and design where site specific data are not available.

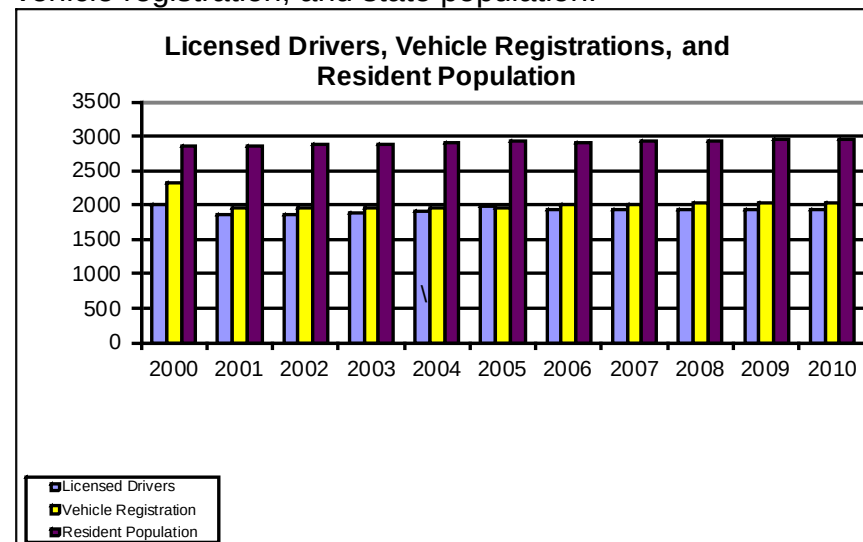

The graph below shows the breakdown of the number of vehicles by functional classification system and by vehicle classification.

The need for information on truck volumes and freight movements is growing with the recognition of the role that freight mobility plays in the economy of truck volume and operating characteristics on the geometric and structural design of roadways and bridges. The next graph illustrates the relationship between the growth of trucks and cars on the Principal Arterial System in Mississippi.

The last graph shows a comparison among licensed drivers, vehicle registration, and state population.

Motor Vehicles

Numerous types of data are collected and reported by various State agencies. Population, vehicle registration, licensed drivers, and fatal accidents are just a few examples of the data collected by the State.

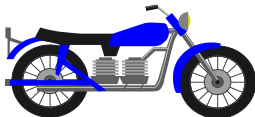

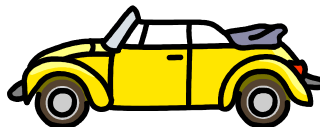

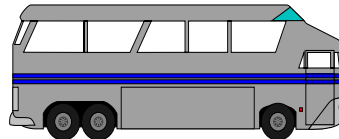

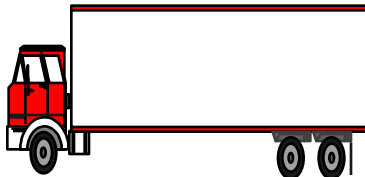

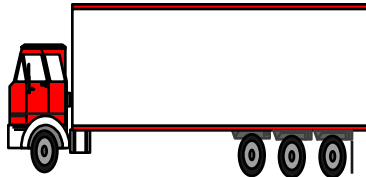

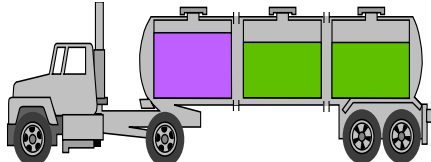

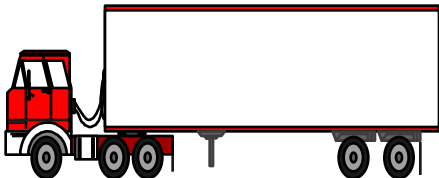

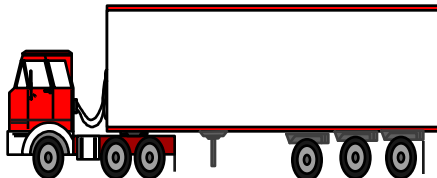

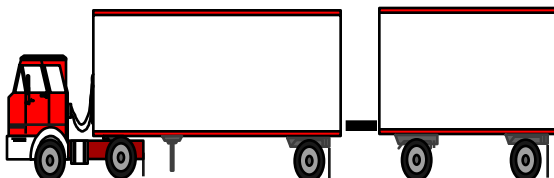

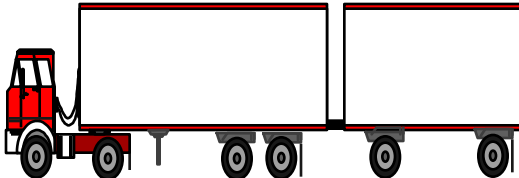

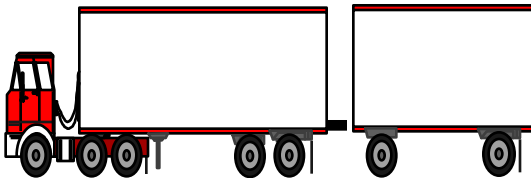

The following graph shows the vehicle miles of travel in Mississippi compared with the number of fatal accidents for a period of eleven years.

Section B

Vehicle Classification Data

FHWA Vehicle Classifications

1 Motorcycles	2 Passenger Cars	3 Two Axle, 4 Tire Single Units	4 Buses
			
5 Two Axle, 6 Tire Single Units	6 Three Axle Single Units	7 Four or More Axle Single Units	8 Four or Less Axle Single Trailers
			
9 Five Axle Single Trailers	10 Six or More Axle Single Trailers	11 Five or Less Axle Multi-Trailers	
			
12 Six Axle Multi- Trailers	13 Seven or More Axle Multi- Trailers

Section H

Mississippi Scenic Byways Description By Name

Mississippi Scenic Byways Program

The Mississippi Scenic Byways Program was established in July 2002 through the passage of Senate Bill 2098. This legislation provides the authority of the Mississippi Department of Transportation (MDOT) to administer a Mississippi Scenic Byways Program. To assist the MDOT in the development and administration of the Mississippi Scenic Byways Program, the legislation also provides for the creation of a Scenic Byways Advisory Committee. Through an annual pre-application submittal process, the Mississippi Scenic Byways Advisory Committee selects highways, streets, or roads that qualify as a scenic byway under the Mississippi Scenic Byways Program. If selected, the byway leaders or sponsors may proceed in the development and submission of a corridor management plan (CMP) to the Scenic Byways Advisory Committee. Byway leaders must also hold a public hearing in the area surrounding the byway. After the CMP and final nomination package is approved by the Advisory Committee, byway leaders with the recommendation of the Advisory Committee may submit a bill to the Mississippi Legislature requesting designation as a Mississippi Scenic Byway. The bill must pass both the House and Senate and be signed by the Governor to be named a Mississippi Scenic Byway.

As determined by the National Scenic Byways Program, there are six intrinsic qualities a road can possess in order to be considered for scenic byway designation. These include archaeological, cultural, historic, natural, recreational, and scenic qualities. To be considered for National Scenic Byway designation, a road must possess

at least one of the resources. To receive an All-American Road designation, a road must possess multiple intrinsic qualities that are nationally significant, and it must contain one-of-a-kind features that do not exist elsewhere. The road or highway must also be considered a “destination unto itself.” That is, the road must provide an exceptional traveling experience so recognized by travelers that they would make a drive along the highway a primary reason for their trip.

The National Scenic Byways Discretionary Grants Program provides funding for byway-related projects each year, as part of the Federal Highway Administration's Discretionary Grants Program. Projects to support and enhance National Scenic Byways, All-American Roads, and State-designated byways are eligible. Applications are prepared online by byway leaders, and submitted through the MDOT. The Mississippi Scenic Byways Advisory Committee is responsible for prioritizing all project applications submitted by designated byways. The MDOT is responsible for forwarding all grant requests to the Federal Highway Administration (FHWA). FHWA is then responsible for selecting the projects to be awarded. This is a discretionary program, and therefore funding is not guaranteed. All applicants compete for funding on a national level.

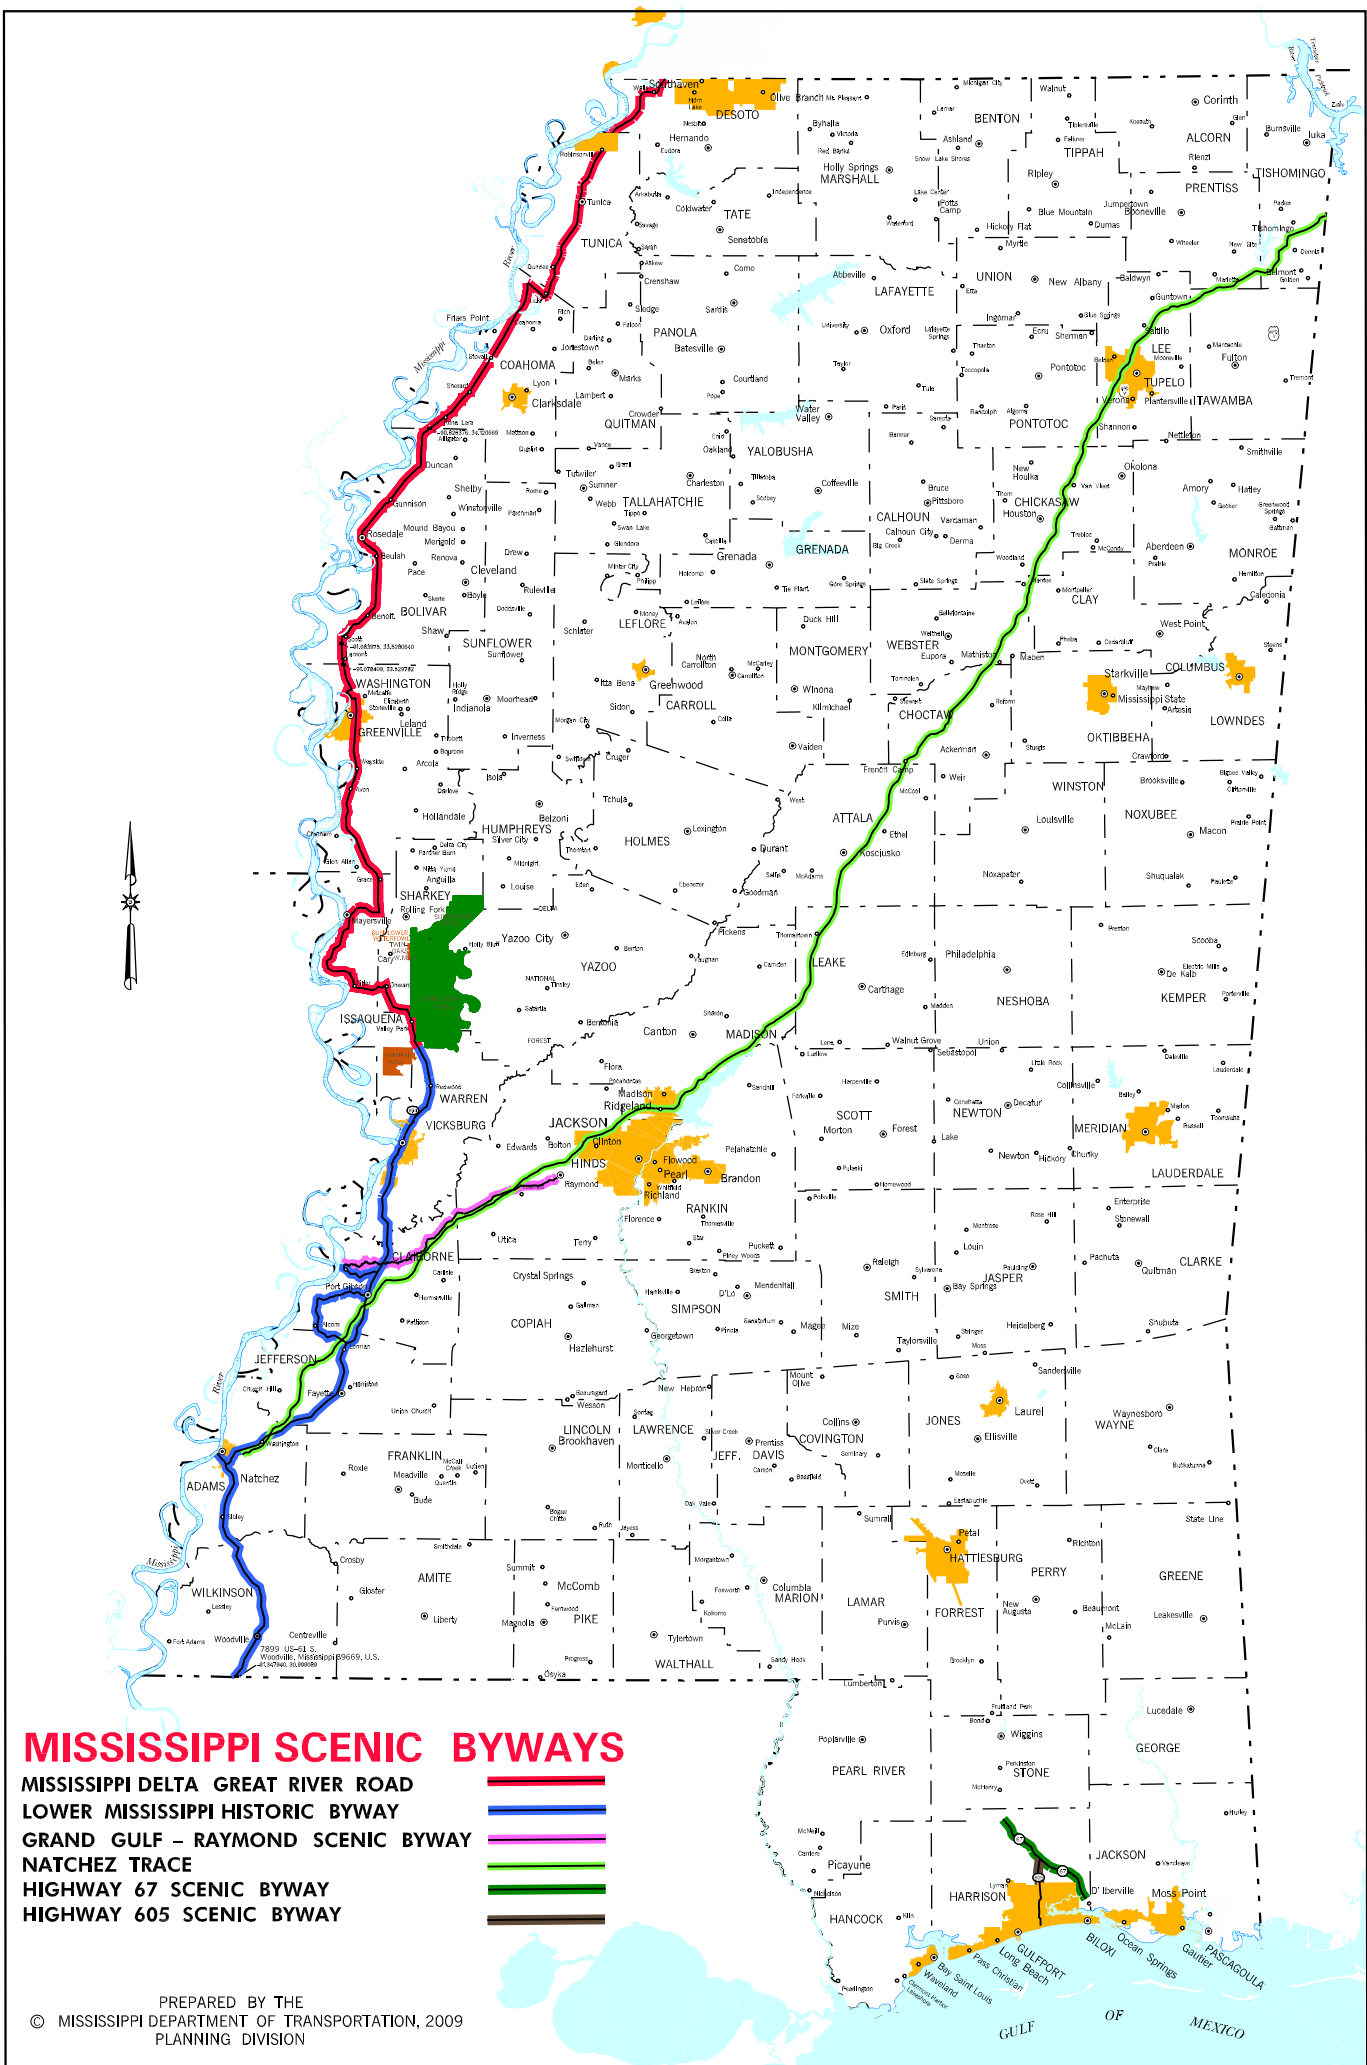

Mississippi Scenic Byways Descriptions by Name

Name	Designation	Designated By	Description
Grand Gulf-Raymond Scenic Byway	State-designated Byway	Chapter 316, Senate Bill 2455, Laws 2004	Begins at the Grand Gulf Military Monument on the MS River then runs east along the Back Grand Gulf Rd to Frasier Rd, following east along Frasier Rd to Y-Camp Rd, following east along Y-Camp Rd to Ingleside-Karnac Ferry Rd to US 61, then the route continues 0.5 miles north of US 61, eastward along Willows Rd, then northeastward along Old Port Gibson Rd terminating at the Raymond Military Park at the City of Raymond.
