Introduction

This report provides information on public road length and vehicle distance of travel in Mississippi. Included are several graphs and tables illustrating information contained in the Planning Division's files as of December 31, 2017. These totals are based upon road distances as determined by distance measurement instruments (DMI). Therefore, they may not agree with other Department publications that utilized "plan measurements," based upon horizontal survey distance. However, due to metric conversions and rounding, calculations may vary slightly between tables.

Since most travel is upon State maintained highways, they receive the majority of user taxes. Figure 1 illustrates road length and distance of travel by maintenance responsibility.

Figure 1

Figure 2 shows how MDOT road length and distance of travel is arranged by functional classification.

Figure 2

The Designated Section of this publication is to provide, in a single source, a compilation of route designations in the State of Mississippi by either the United States Congress or the Mississippi State Legislature. This compilation is for planning purposes only and is not intended to represent legal descriptions. The applicable laws passed by the legislative bodies designating routes should be consulted in the event there are any doubts about a designation when using this publication.

The legislative bodies can make additions to, or deletions from, the State Designated Highway System. It should, however, be pointed out that the terms "State Designated Highway" and "State Maintained Highway" are not synonymous. In order to become apart of the State Maintained System, a route must be officially designated, meet certain geometric criteria, and be accepted by the Transportation Commission for maintenance. Routes on the designated system that are not accepted for maintenance by

the Commission should be maintained by the local jurisdiction in which the route is located.

Figure 3 summarizes maintenance category by route.

Miles by Route and Maintenance Category – 2017

Figure 3

Figure 4 summarizes the extent of the National Highway System. The National Highway System Designation Act of 1995 was signed by President Clinton on November 28, 1995. It provided for the establishment of an interconnected system of Interstate and principal arterial routes to serve major population centers, international border crossings, ports, airports, public transportation facilities, and other intermodal transportation facilities.

National Highway System Miles with Intermodal Connections			
National Highway System Route Category	Rural	Urban	Total
Interstate	568.776	253.076	821.852
Other NHS	1,753.606	959.784	2,713.390
NHS Intermodal Connections	58.856	50.694	109.550
Statewide Totals	2,381.238	1,263.554	3,644.792

Figure 4

The National Highway System (NHS) was established by the Department of Transportation (DOT) in cooperation with the States, local officials, and metropolitan planning organizations (MPO).

Figure 5 summarizes the lane length used by the Maintenance Division for Fiscal Year 2017 budgeting purposes only. Lane length is based on plan measurements and does not include bridges. Therefore, it is not comparable with other road length in this publication. Lane length includes the length of all individual lanes of travel (through lanes, turn lanes, on and off ramps, and other auxiliary lanes).

MDOT Maintenance Lane Length Not Including Bridge - 2017	
Maintenance District	Lane Length (Miles)
1	5,516.990
2	5,445.400
Northern Commission District	10,962.390
3	3,779.530
5	5,496.640
Central Commission District	9,276.170
6	5,659.760
7	3,968.390
Southern Commission District	9,628.150
Statewide Total	29,866.710

Figure 5

The total road length remains fairly constant from year to year as seen in Figure 6. The table provides a historical summary of the relationship between non-municipal, municipal, and total statewide length statistics for a five-year period.

Glossary of Terms

Annual Vehicle Miles of Travel (AVMT) - Total annual traffic on a road segment, expressed as Annual Average Daily Traffic multiplied by the number of days in the year, multiplied by the length of the road segment measured in miles.

Annual Average Daily Traffic (AADT) - The estimate of typical daily traffic on a road segment for all days of the week, Sunday through Saturday, over the period of one year.

Average Daily Traffic (ADT) - The total traffic volume during a given time period (more than a day and less than a year) divided by the number of days in that time period.

Average Saturday Traffic - The total traffic volume for all of the Saturdays during a given time period divided by the number of Saturdays in that time period.

Average Sunday Traffic - The total traffic volume for all of the Sundays during a given time period divided by the number of Sundays in that time period.

Average Weekday Traffic - The total traffic volume for the days Monday through Friday during a given time period divided by the number of days in that time period.

Automatic Traffic Recorder (ATR) - A permanent device that records the continuous passage of vehicles across a given section of roadway by hours of the day, days of the

week or months of the year. Also referred to as Continuous Traffic Recorder.

Commercial Vehicles - Vehicles that are categorized as type 4 through 13 according to the FHWA Vehicle Classifications shown on page B-1.

Design Hourly Volume (DHV) - The hourly traffic volume used in the design of highways, usually represented by the thirtieth highest hourly volume of the future year chosen for design.

Directional Distribution of Traffic - The percent of traffic in the direction of the lane(s) with the highest traffic volume.

Functional Classification (FC) - A process by which streets and highways are grouped into classes or systems according to the character of service they provide. The various classes and their definitions are listed below:

Rural Interstate - Roads designated as part of the Interstate System in rural areas.

Rural Principal Arterial - Consists of a connected rural network of important continuous routes that have trip length and travel density characteristics indicative of substantial statewide or interstate travel.

Rural Minor Arterial - An integrated network providing interstate and intercounty service that links cities, larger

towns, major resort areas, etc. that are capable of attracting long distance travel.

Rural Major Collector - Provides services to any county seat not on an arterial route, larger towns not served by higher systems, and other traffic generators of equivalent importance such as schools, shipping points, county parks, important mining and agricultural areas, etc.

Rural Minor Collector - Collects traffic from local roads and brings all developed areas within a reasonable distance of a collector road, provides service to the remaining smaller communities and links the locally important traffic generators.

Rural Local - Provides access to adjacent land, provides service to smaller communities and carries travel from low population areas to rural collectors.

Urban Interstate - Roads designated as part of the Interstate System in urban areas.

Urban Principal Arterial-Other Freeways and Expressways - Roads which are controlled access, but not designated as part of the Interstate System.

Urban Principal Arterial - Serves the major centers of activity of a metropolitan area, the highest traffic volume corridors, and the longest trip desires. Should carry a high proportion of the total urban area travel.

Urban Minor Arterial - Interconnects with the urban principal arterial system and provides service to trips of moderate length at a somewhat lower level of travel mobility than major arterials.

Urban Collector - Provides both land access service and traffic circulation within residential neighborhoods, commercial and industrial areas, distributing trips from the arterials through the area to the ultimate destination. The collector street also collects traffic from local streets in residential neighborhoods and channels it into the arterial system.

Urban Local - Provides direct access to abutting land and access to the higher classification systems.

High Hour Volumes - The hourly traffic volumes for each Continuous Traffic Recorder site are listed in descending order to find the highest volume, the tenth highest volume, the twentieth highest volume, and so on.

Lane length - The length of all individual lanes of travel (through traffic lanes, turn lanes, on and off ramps, and other auxiliary lanes). Lane length is based on construction plans and does not include bridges (i. e. 1 mile of 4-lane roadway would have a lane length of 4 miles)

MDOT maintained - Public roads maintained by the Mississippi Department of Transportation.

Municipal - Public roads within the corporate limits of a municipality.

Non-commercial - Motorcycles, passenger cars, and light trucks with four tires.

Non-municipal - Public roads not within the corporate limits of a municipality.

Non-state designated - Public roads not designated as state highways by the Mississippi Legislature.

Other maintained - Public roads not maintained by the Mississippi Department of Transportation, but by local governments or other public entities.

Peak Hour - A 60-minute interval that contains the largest volume of traffic for a specific day of “average” day.

Public maintained - Public roads maintained by the Mississippi Department of Transportation and/or local governments or other public entities.

Public Road Length - The length of roadway open to the public regardless of the number of lanes. Public road length does not include on and off ramps. Public road length equates to the distance as if driving along the roadway (i. e. 1 mile of 4-lane roadway would have a public road length of 1 mile).

Rural - Comprises the areas outside the urban boundaries.

State designated - Public roads designated as state highways by the Mississippi Legislature.

Strategic Highway Research Program (SHRP) - A five-year program for pavement and operations research funded by Congress and managed through the program for pavement and operations research funded by Congress and managed through the National Academy of Sciences. One of the four research areas, Long-Term Pavement Performance is planned as a twenty-year program. This program was continued by the Federal Highway Administration in 1992.

Surface - Length tabulations are reflected by two major categories, paved and unpaved.

Urban - Designated by the Bureau of the Census with a 1990 Census population of 5,000 or more.

Vehicle Classifier - A device that counts and classifies vehicles by type and axle configuration.

Section A

Highway Planning

Overview of the Highway Planning and Development Process

There are five basic stages in the highway development process that involves planning, project development (preliminary design), final design, right-of-way, and construction. It is during the first three stages that designers and communities working together can have the greatest impact on the final design features of the project. The flexibility during the detailed design phase is limited a great deal by the decisions made at the earlier stages of planning and project development.

The planning stage involves the definition of the need for highway improvement projects and may take place on the State, regional, or local level. The involvement of the public is a key part of the decision-making process that occurs during planning.

There are many factors to consider before a project is designed. The potential impact that a proposed facility or improvement may have while the project is still in the conceptual phase is a main consideration. Some of the main factors are shown in the following diagram.

Decisions made at the project development level help to define the major features of the resulting project through the remainder of the design and construction process. Just as in the planning stage, there are many decisions made during the scoping phase of project development, regardless of the level of detail being studied. It is important that the various interested individuals or groups be identified and provided with the opportunity to get involved. A good community impact assessment will also help identify interested parties.

Design is a part of the overall highway development process. Detailed design occurs in the middle of the process, linking the preceding phases of planning and project development with the subsequent phases of right-of-way acquisition, construction, and maintenance.

The project can move into the final design stage after an alternative has been selected. Upon completion of the final design stage, a complete set of plans, specifications, and estimates of quantities of materials is ready for solicitation of construction bids.

Minor adjustments may be made to the design of a project during the right-of-way and construction stages. After right-of-way is purchased for a project, a construction contractor is selected and construction commences.

The Mississippi Highway System

The Mississippi Highway System consists of over 77 thousand miles of roads and streets. Of this, 64 thousand miles are located in rural areas, and almost 13 thousand miles are in urban areas. The graph below shows the relationship of total road miles and miles traveled by system in the rural and urban areas.

The correlation between vehicle miles traveled, gasoline prices, and the consumer price index is shown in the graph on the following page. The consumer price index is used as a “fixed weight” to measure the change in the vehicle miles traveled and the gasoline prices.

Functional Classification

Functional Classification defines the role that a particular public road plays in serving the flow of trips through a highway network.

Travelers use a combination of arterial, collector, and local roads for their trips. Each road type has a specific purpose or function. Some provide land access and others provide travel mobility at varying levels. Arterials provide a high level of mobility and a greater degree of access control while local facilities provide a high level of access to adjacent properties but a low level of mobility. Collector roadways provide a balance between mobility and land access. Local roadways serve a land access function to homes, businesses, individual farms and ranches, and other uses.

The next graph illustrates the Average Daily Traffic (ADT) by Functional Classification for three consecutive years.

Road Revenues

The Mississippi Legislature provides state funding through motor fuel taxes and other fees. The state motor fuel tax is a primary funding source for the MDOT. The MDOT received \$303.8 million in funds from state motor fuel taxes (includes locomotive fuel) during fiscal year 2017.

Continuous Traffic Recorders

Continuous Traffic Recorders are used to provide continuous traffic count coverage 24 hours a day 365 days a year.

Continuous counts are the backbone of the State's traffic counting program. This data are used to develop seasonal or monthly, day-of-week, and growth factors which are then used to adjust short coverage counts to AADT.

Since Continuous Traffic Recorders are continuously collecting data, information can be gathered regarding traffic patterns in areas throughout the State. Weekday traffic volumes are higher in the urban areas than those volumes in the rural areas. The following graph compares the rural and urban traffic patterns by day of the week.

Typically, the traffic on weekends is higher in gaming areas than in non-gaming areas. The graph below illustrates the comparison of gaming and non-gaming traffic by day of week.

Vehicle Classification

Vehicle classification is defined as the types of vehicles that travel a particular roadway at a specific location and the number of axles on the vehicle. Vehicle classification counts are made at locations selected by statistical analysis to insure accurate distribution. The vehicle classification data are of consider valuable to agencies involved in almost all aspects of transportation planning and engineering.

Generally, classification counts are made at locations for a period of 48 hours and record the number of vehicles in each group by hourly increments. Classification data are summarized in order to obtain generalized percentages of commercial and non-commercial vehicles during an average 24-hour period. These summary data are utilized in planning and design where site specific data are not available.

The graph below shows the breakdown of the number of vehicles by functional classification system and by vehicle classification.

The need for information on truck volumes and freight movements is growing with the recognition of the role that freight mobility plays in the economy of truck volume and operating characteristics on the geometric and structural design of roadways and bridges. The next graph illustrates the relationship between the growth of trucks and cars on the Principal Arterial System in Mississippi.

Motor Vehicles

Numerous types of data are collected and reported by various State agencies. Population, vehicle registration, licensed drivers, and fatal accidents are just a few examples of the data collected by the State.

The following graph shows the vehicle miles of travel in Mississippi compared with the number of fatal accidents for a period of eleven years.

The last graph shows a comparison among licensed drivers, vehicle registration, and state population.

Mississippi Scenic Byways Program

The Mississippi Scenic Byways Program was established in July 2002 through the passage of Senate Bill 2098. This legislation provides the authority of the Mississippi Department of Transportation (MDOT) to administer a Mississippi Scenic Byways Program. To assist the MDOT in the development and administration of the Mississippi Scenic Byways Program, the legislation also provides for the creation of a Scenic Byways Advisory Committee. Through an annual pre-application submittal process, the Mississippi Scenic Byways Advisory Committee selects highways, streets, or roads that qualify as a scenic byway under the Mississippi Scenic Byways Program. If selected, the byway leaders or sponsors may proceed in the development and submission of a corridor management plan (CMP) to the Scenic Byways Advisory Committee. Byway leaders must also hold a public hearing in the area surrounding the byway. After the CMP and final nomination package is approved by the Advisory Committee, byway leaders with the recommendation of the Advisory Committee may submit a bill to the Mississippi Legislature requesting designation as a Mississippi Scenic Byway. The bill must pass both the House and Senate and be signed by the Governor to be named a Mississippi Scenic Byway.

As determined by the National Scenic Byways Program, there are six intrinsic qualities a road can possess in order to be considered for scenic byway designation. These include archaeological, cultural, historic, natural, recreational, and scenic qualities. To be considered for National Scenic Byway designation, a road must possess

at least one of the resources. To receive an All-American Road designation, a road must possess multiple intrinsic qualities that are nationally significant, and it must contain one-of-a-kind features that do not exist elsewhere. The road or highway must also be considered a “destination unto itself.” That is, the road must provide an exceptional traveling experience so recognized by travelers that they would make a drive along the highway a primary reason for their trip.
